# National Interagency Coordination Center Incident Management Situation Report <br> Friday, March 3, 2017 - 0800 MT <br> National Preparedness Level 1 

National Fire Activity (Feb. 24 - Mar. 2)

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command Teams Committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

## Southern Area (PL 2)

New fires:
1,144
New large incidents:
Uncontained large fires:

* Salt Fork, Oklahoma DOF. Four miles west of Altus, OK. Tall grass and timber. Moderate fire behavior with wind driven runs.
* Old Baldy, East Central Area, Oklahoma DOF. Twenty two miles south of McAlester, OK. Hardwood litter and brush. Moderate fire behavior with backing and creeping.
* Petsemoie, Osage Agency, BIA. Two miles northwest of Osage, OK. Hardwood litter and tall grass. Minimal fire behavior with smoldering. Residences threatened.
* 81st (Powerline), Oklahoma DOF. Six miles south of Mannford, OK. Tall grass and timber. Moderate fire behavior with running. Residences threatened.
* Trooper, Wewoka Agency, BIA. Five miles southwest of Cromwell, OK. Hardwood litter and tall grass. Minimal fire behavior.

Parker Hollow \#1, Kentucky DOF. Started on private land one mile west of Carter, KY. Hardwood litter and grass. No new information. Last report unless new information is received.

Cold Mountain, National Forests in North Carolina. Nine miles southeast of Waynesville, NC. Hardwood litter, closed timber litter and short grass. No new information. Last report unless new information is received.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments. ***
Additional wildfire information is available through the Geographic Areas at http://gacc.nifc.gov/
Predictive Services Discussion: Breezy winds and low humidities will create pockets of critical fire weather conditions across Eastern New Mexico, West Texas, and Western Oklahoma on Friday through Sunday. A more significant event may occur Monday in these areas when a strong, windy, dry front will move from the Southwest into the Southern Plains. A series of winter storms will add several feet of snow to the snowpack across Northern California, Oregon and Washington with the mountains of Idaho and Montana also receiving substantial snowfall during the Friday through Tuesday period. A secondary surge of moisture later in the week is expected and could add some rain to the snowpack. A warming trend will begin Saturday across the Northern Great Plains, Great Lakes Region, and New England, but cooler temperatures will return mid-week as a passing front pulls down colder air from Canada. Florida and Georgia will remain dry during the period though a passing front could bring a quick round of moisture to the region Wednesday. Alaska will remain cold and dry through the next week with some moderation in temperatures expected after Monday. Precipitation will be limited to mainly coastal areas and to the Aleutian Islands.

# VEHICLE ENTRAPMENT 

Vehicles/Roads Category

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation.
- Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles (Harris Fire, SoCal, 2007).
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking break, leave the motor running at high RPM, and keep the vehicle lights on
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters with reflective material placed against window.
- You must protect your airway; remain as low in the vehicle as possible, and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
- Temperatures may reach over 200 degrees Fahrenheit.
- Smoke and sparks may enter the vehicle.
- Plastic parts may start to melt and give off toxic gases.
- Windows may start to crack.
- Exposed skin may receive radiant heat burns.
- If the vehicle catches fire, or windows blow out, and you must exit the vehicle before the fire has passed, then:
- Each crewmember should cover themself with a fire shelter.
- Exit the vehicle from the side away from the greatest heat.
- Stay together and get as low to the ground as possible, moving away from the vehicle.
- Deploy your shelter in a safe area.
