# National Interagency Coordination Center Incident Management Situation Report <br> Friday, May 5th, 2017 - 0800 MT <br> National Preparedness Level 1 

## National Fire Activity (Apr. 28 - May 4)

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command Teams Committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

| Active Incident Resource Summary |  |  |  |  |  |  |

## Southern Area (PL 3)

New fires:
New large incidents:214

Uncontained large fires: 3

Type 1 IMTs committed:
West Mims, Okefenokee National Wildlife Refuge. IMT 1 (Dueitt). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Active fire behavior with spotting, flanking and backing. Numerous structures threatened. Road, area and trail closures in effect.

Cowbell, Big Cypress National Preserve, NPS. Thirty six miles west of Weston, FL. Tall grass, southern rough and timber. Minimal fire behavior with backing, creeping and smoldering. Structures threatened. Area and trail closures in effect.
$3^{\text {th }}$ Ave., Florida Forest Service. Transfer of command from Florida IMT 2 (Kern) back to the local unit occurred yesterday. Nine miles east of Golden Gate, FL. Southern rough. Minimal fire behavior with smoldering.

* Triple Ranch, Florida Forest Service. Eighteen miles southwest of June Park, FL. Southern rough. Minimal fire behavior.

Sod Farm 2, Florida Forest Service. Eight miles west of Orange City, FL. Southern rough. Minimal fire behavior. Last report unless significant activity occurs.

MM 87 on 75, Florida Panther National Wildlife Refuge. One mile southwest of Miles City, FL. Tall grass, southern rough and timber. Minimal fire behavior with smoldering.

* International, Merritt Island National Wildlife Refuge. Four miles south of Oak Hill, FL. Southern rough. Active fire behavior with crowning, torching and running. Structures threatened.

Predictive Services Discussion: Breezy and dry conditions are expected across northern Florida and Southeast Georgia Friday and Saturday as a cool, wet system over the southern Appalachians moves northeast into New England. From Sunday onward, expect the overall critically dry conditions to continue. There is a chance for some moisture at the end of next week. To the west, unseasonably warm and dry conditions are expected through mid-week as a strong ridge of high pressure slowly moves east into the Great Plains from the Continental Divide. The departing ridge of high pressure will allow for a strengthening area of low pressure to move south across California Sunday and then east into the Four Corners region by Tuesday. Some wetting precipitation is possible along the coastal ranges of California, Southern Sierra mountains and across Arizona during this period. The northwestern corner of the CONUS will revert to a slightly cooler pattern as an overall weak westerly flow develops and allows for several weak systems to move east across the area. In Alaska, a high pressure ridge will extend northwestward into the state from the Yukon Territory beginning Sunday and linger over the region through the entirety of next week. While temperatures will be above normal, scattered showers will continue to be possible across the southern portions of the interior just north of the Chugach and Wrangell mountain ranges. http://www.predictiveservices.nifc.gov/outlooks/outlooks.htm

AVIATION COMMUNICATIONS

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
- How they work.
- When to use them.
- What frequencies are established for aircraft in your area?
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people you are talking to. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
