Predictive Services Discussion: A cold front will move east from the Four Corners region and will bring isolated storms to New Mexico and southern Colorado by mid-day. Breezy southwesterly winds along with near single digit humidities ahead of the front will create critical fire weather conditions across West Texas and southeastern New Mexico. A strong, cool low pressure system will move southeast into the central Rockies bringing wetting precipitation to Colorado, Wyoming, and Utah. Locations along the West Coast will begin to see a warming trend as high pressure begins to approach from the eastern Pacific. In Alaska, a weak disturbance will push north from the Gulf of Alaska into the interior increasing the afternoon shower activity. A few lightning strikes may be possible along the border with the Yukon Territory.
