

**National Interagency Coordination Center  
Incident Management Situation Report  
Wednesday, May 24th, 2017 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (93 new fires)
New large incidents:	0
Large fires contained:	2
Uncontained large fires:**	2
Area Command Teams Committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 2)**

New fires:	14
New large incidents:	0
Uncontained large fires:	2
Type 1 IMTs committed:	1
NIMOs committed:	1

**West Mims**, Okefenokee National Wildlife Refuge. Unified command between Florida IMT 1 (Leneave) and NIMO (Quesinberry). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Minimal fire behavior with creeping and smoldering. Numerous structures threatened. Evacuations, road, area and trail closures in effect. Precipitation occurred over the fire area yesterday.

**Echo Springs**, Merritt Island NWR. Ten miles east of Avon Park, FL. Southern rough. Moderate fire behavior with flanking, backing and smoldering. Structures threatened.

**Campfire**, Florida Forest Service. Includes previously reported Campfire 2 incident. Twenty-two miles west of Coral Springs, FL. Southern rough. Active fire behavior with flanking and backing. Last report unless significant activity occurs.

**Three Mile**, Florida Forest Service. Thirty-five miles west of Coral Springs, FL. Southern rough. Active fire behavior with flanking, backing and running. Last report unless significant activity occurs.

**Raintree Blvd.**, Florida Forest Service. Two miles west of Lake Suzy, FL. Southern rough. Minimal fire behavior. Last report unless significant activity occurs.

**Predictive Services Discussion:** A strong, wet low pressure system will move from the great lakes region into the southeast bringing widespread wetting rain. Areas most impacted by significant rainfall will be Georgia, Florida, and Alabama. On either side of the system, high pressure will produce warm and dry conditions across New England and the Great Plains. Looking west, a passing cold front will produce cooler but breezy conditions across the Pacific Northwest, Northern Rockies, and northern Great Basin as it quickly moves east, flattening the preexisting ridge of high pressure. Warm and dry conditions will continue across the remainder of the Great Basin, California and the Southwest. A disturbance located along the central California coast will allow for the development of isolated wet storms in the Sierras during the afternoon. In Alaska, a strong and wet cold front will move into western portions of the state from the Bering Sea while high pressure along the Canadian border will keep the interior warm and dry for another day.

## Fuel Handling

*Miscellaneous Fireline Hazards*

### Fuel Handling – Watch Out for “Normalization”

There is an apprehension that the safety concerns surrounding the use of gasoline in firefighting operations can get “normalized”. In firefighting, we use gasoline for a variety of applications, including: pumps, chainsaws, vehicles, drip torches, etc.

“Normalization” of hazards or risks is when we get comfortable around these hazards and take shortcuts without consequence. After a while, we can get so comfortable with these shortcuts that we forget about the original mitigation to reduce the hazard or risk.

1. What do we use gasoline for in our firefighting operations?
2. What risks are associated with our uses of flammable liquids?
3. What mitigations or procedures are in place for handling fuel?
4. What can you do to prevent being sprayed or doused in gasoline from gas tank pressure?
5. What should you do to extinguish someone who is on fire?

Check out [this new RLS](#) that spotlights **14 instances** of fuel igniting incidents reported in the past 5 years.
