

**National Interagency Coordination Center  
Incident Management Situation Report  
Monday, June 5th, 2017 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (85 new fires)
New large incidents:	1
Large fires contained:	0
Uncontained large fires:**	4
Area Command Teams Committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 2)**

New fires:	1
New large incidents:	0
Uncontained large fires:	1
Type 1 IMTs committed:	1
NIMOs committed:	1

**West Mims**, Okefenokee National Wildlife Refuge. Unified command between Florida IMT 1 (Leneave) and NIMO (Quesinberry). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Minimal fire behavior with smoldering and creeping. Numerous structures threatened. Road, area and trail closures in effect. Precipitation occurred over the fire area yesterday.

**Prada Drive**, Florida Forest Service. Ten miles south of Punta Gorda, FL. Southern rough. Minimal fire behavior.

Incident Name	Unit	Size		%	Ctn/ Comp	Est	Personnel		Resources			Strc Lost	\$\$ CTD	Origin Own

**Predictive Services Discussion:** An intensifying ridge of high pressure over northern Mexico will expand northward into the Southwest and Great Basin. This will allow very warm and dry conditions to develop. A compact area of low pressure will move east into the northern Great Plains and should bring wetting precipitation to the dry grasslands of eastern Montana and the Dakotas. Elsewhere across the west expect near normal conditions. Florida will see another increase in shower activity as a departing cold front moves southeast across the state. The interior of Alaska will see an increase in convection as a strong area of low pressure moves north into the northern Gulf of Alaska.

## HAZARD TREE – NO WORK ZONES (NWZ)

Felling Safety Category

Knowing when the exact time a given hazard tree (or compromised section) will fail is an extremely difficult, and is, in many cases, an unpredictable task. Given this fact, we need to manage firefighters' exposure to these hazards by creating a safe work area or NWZ. The size and extent of the NWZ must be determined by onsite conditions, such as terrain, lean, active fire in the tree and adjoining trees.

When an identified hazardous tree cannot be felled, then perform an assessment of which areas have too high a risk, and post a lookout to warn the personnel to stay clear of these areas while working in adjacent areas. If hazard still exists before leaving the area, flag the NWZ so that personnel entering the area will be able to recognize the hazard. Use the following failure zone illustrations as examples to help manage firefighter exposure to these identified

hazards. Also remember to include the possibility of the "Domino Effect" to surrounding trees.
