

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, June 8th, 2017 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (118 new fires)
New large incidents:	2
Large fires contained:	1
Uncontained large fires:**	6
Area Command Teams Committed:	0
NIMOs committed:	1
Type 1 IMTs committed:	1
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 2)

New fires:	10
New large incidents:	0
Uncontained large fires:	0
Type 1 IMTs committed:	1
NIMOs committed:	1

West Mims, Okefenokee National Wildlife Refuge. Unified command between Florida IMT 1 (Leneave) and NIMO (Quesinberry). Sixteen miles southeast of Fargo, GA. Timber and southern rough. Minimal fire behavior with smoldering. Numerous structures threatened. Road, area and trail closures in effect. Precipitation occurred over the fire area yesterday.

Incident Name	Unit	Size		%	Ctn/ Comp	Est	Personnel		Resources			Strc Lost	\$\$ CTD	Origin Own

Alaska Area (PL 2)

New Fires: 26
 New large incidents: 0
 Uncontained large fires: 1

Bell Creek, Southwest Area Forestry, Alaska DOF. Previously reported incident. Three miles northwest of Crookes Creek, AK. Timber and hardwood litter. Extreme fire behavior with torching and crowning. Structures threatened. Last report unless significant activity occurs.

North Robertson, Tok Area Forestry, Alaska DOF. Twenty-eight miles northwest of Tok, AK. Timber. Minimal fire behavior with single tree torching, creeping and smoldering. Structures threatened.

Deadmans Slough, Alaska Fire Service, BLM. Two miles south of Anvik, AK. Timber. No new information.

Predictive Services Discussion: A strong ridge of high pressure extending west from the interior of Alaska and the Yukon Territory to Barrow will keep conditions warm and dry across the interior. Borderline critical fire weather conditions may be possible from Galena and Fairbanks north to the Brooks Range with gusty easterly winds and low humidities. Showers and cooler temperatures will be possible along and west of the Cascades and Siskiyou Mountains across the Pacific Northwest and Northern California as a potent cold front moves on shore in advance of a very strong low pressure system. Borderline critical fire weather conditions are expected across the Four Corner's region and southern Nevada as breezy winds and low humidities interact with unstable conditions in the afternoon. Isolated wet and dry storms will be possible along the Continental Divide. Looking east, no significant fire weather impacts are expected other than continued drought relief across Florida coming from a weakening frontal boundary stalled over the state.

NFDRS PocketCards

Weather/Fire Behavior Category

The NFDRS PocketCard is a tool for field personnel to locally track outputs of the National Fire Danger Rating System (NFDRS) throughout the fire season. It is based on current and historical weather for a localized area and the area's historic fire occurrence. The PocketCard displays a general assessment of the fire potential and identifies combinations of local weather and fuel conditions that might contribute to severe fire behavior.

The PocketCard provides:

- A general indicator of the potential fire danger for a given rating or protection area.
- A graph showing the trend and status of the current year's fire season.
- A comparison of current year conditions to historical worst and average conditions.
- Fire danger values related to past large or problem fires.
- Critical local thresholds for temperature, humidity, wind speed, and fuel moistures associated with large or problem fires.

Discuss the following ways to use the PocketCard:

- Use it primarily before fires occur, before arriving to a fire. It is also useful during initial fire size-up, initial attack, and extended attack.
- Use it to learn of critical thresholds that predict the potential for extreme fire behavior for the local area. Be aware that local critical thresholds may be occurring earlier in the season.
- Use it to compare current and predicted local fire danger to historical local fire danger to enhance situational awareness.
- Use it to track daily fire danger indices that gauge the potential for weather and fuels to support extreme fire behavior and of the difficulty of control.
- Use it to supplement local experience.
- Use it as a point of reference for firefighters not familiar with the area represented by the card.
- When you receive a fire assignment outside your local area, visit the National PocketCard website at <http://fam.nwcg.gov/fam-web/pocketcards/default.htm> where PocketCards are filed by Geographic Area.
- Put it in the pocket of all your firefighters and keep one in your fire vehicle.
- Post it in dispatch. Use them in briefings. Provide them to incoming crews.
- **Do not use the PocketCard for site specific fire behavior predictions and fireline actions or without an interpretive briefing.**
- Review definitions and implications of ERC and BI values.
