

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, June 23rd, 2017 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity:	Light (83) new fires
New large incidents:	4
Large fires contained:	6
Uncontained large fires:**	16
Area Command Teams Committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	6

\*\*Uncontained large fires only include fires being managed under a full suppression strategy.

**Southwest Area (PL 4)**

New fires:	15
New large incidents:	3
Uncontained large fires:	10
Type 1 IMTs committed:	1
Type 2 IMTs committed:	3

**Frye**, Coronado, NF. IMT 2 (Sinclair). Nine miles west of Swift Trail Junction, AZ. Timber, brush and chaparral. Extreme fire behavior with spotting, wind driven and uphill runs. Numerous residences threatened. Road, area and trail closures in effect.

**Boundary**, Coconino, NF. IMT 2 (Andrews). Twelve miles north of Bellemont, AZ. Timber, short grass and heavy logging slash. Active fire behavior with backing, flanking and torching. Residences threatened. Road, area and trail closures in effect.

**Bonita**, Carson, NF. IMT 2 (Bales). Sixteen miles northeast of Canjilon, NM. Timber, brush and short grass. Moderate fire behavior with backing and smoldering. Numerous residences threatened. Road, area and trail closures in effect.

**Highline**, Tonto, NF. Transfer of command from IMT 1 (Day) back to the local unit will occur tomorrow. Eight miles north of Payson, AZ. Timber, brush and tall grass. Minimal fire behavior with creeping and smoldering. Road, area and trail closures in effect.

\* **303**, Central District, Arizona DOF. Four miles north of Phoenix, AZ. Brush, tall and short grass. Active fire behavior with running and spotting. Numerous residences threatened. Road closures in effect.

\* **Highland**, Bernalillo District, New Mexico State Forestry. Fifteen miles northeast of Encino, NM. Short grass and brush. Active fire behavior with group torching, wind driven runs and short range spotting.

**Cajete**, Santa Fe, NF. Eight miles northeast of Jemez Springs, NM. Timber and medium logging slash. Minimal fire behavior with smoldering. Area closures in effect.

**Encino**, Southeast District, Arizona DOF. Two miles south of Sonoita, AZ. Tall grass and brush. Minimal fire behavior with creeping and smoldering. Numerous residences threatened.

\* **#3 Rain**, Kaibab, NF. Five miles southwest of Tusayan, AZ. Timber. Active fire behavior.

**R-14**, Fort Apache Agency, BIA. Three miles south of Cedar Creek, AZ. Timber. Minimal fire behavior with smoldering.

**Maggie**, Phoenix District Office, BLM. Six miles north of Black Canyon City, AZ. Tall grass, brush and timber. No new information.

**Encino**, Bernalillo District, New Mexico State Forestry. Thirteen miles northwest of Rio Rancho, NM. Brush and short grass. Last report unless new information is received.

**Predictive Services Discussion:** Hot and dry conditions will continue along the West Coast as the high pressure ridge remains anchored over the coast. Isolated storms will be possible along the Continental Divide in the afternoon as moisture continues to move further north into the country from Mexico. A back door cold front will move south from central Canada into Montana and North Dakota bringing increased winds and cooler temperatures. Scattered showers may accompany the front's passage. In Alaska, cooler conditions are expected as moisture works its way into the interior from the south increasing shower activity over much of the state. A cold front will move east across the eastern states bringing strong storms to the mid-south.

<https://www.predictiveservices.nifc.gov/outlooks/outlooks.htm>

## EXTREME FIRE BEHAVIOR 2

*Weather / Fire Behavior Category*

Mild, moderate and EXTREME fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to respond correctly to the changing situation.

- Discuss how the following factors can contribute or lead to extreme fire behavior:
  - Frost Kill: Has there been a late or unusually extensive freeze? Is the loading of frost-killed fuels high?
  - Drought Conditions: Live Fuel Moistures Index, KBDI, Soil Moisture Index, low humidity, high temperatures
  - Slope: Increases fire spread uphill, preheats fuels by convection, may channel winds

Sea Breeze/Foehn: Wind direction may vary throughout the day, humidity changes may occur; strong wind velocities may drive fire behavior to extremes.

- To aid situational awareness, track NFDERS live and dead fuel moisture outputs.
- Take hourly weather observations and track the hourly changes. By tracking fuel moisture and weather observations and using Fire Severity Related to Fuel Moisture Chart, firefighters can be alerted to those conditions that can lead to situations where there is a high potential for extreme fire behavior.
