# National Interagency Coordination Center Incident Management Situation Report <br> Thursday, June 29th, 2017 - 0530 MT <br> National Preparedness Level 3 

## National Fire Activity

Initial attack activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command Teams Committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:
**Uncontained large fires only include fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

Predictive Services Discussion: The strong ridge of high pressure centered over the Yukon and Northwest Territories will keep eastern portions of the Alaskan interior warm and dry again today. Shower activity will be limited to coastal areas along the northern Gulf of Alaska and to Southwest Alaska as a system remains stalled along the Bering Sea coast. A broad trough of low pressure will linger over the West and the Great Plains and will lead to near normal temperatures. A stationary front stalled out along the Rocky Mountain Front in Montana and Wyoming will lead to a continuance of significant wet convection across both states and the central plain states. Across the Southwest, monsoonal moisture will continue to ooze northward into New Mexico and southeastern Arizona and will lead to another round of scattered wet storms in the afternoon. Meanwhile further south over central and southern Mexico tropical moisture appears to be building in the atmosphere and will be looking for a way to work its way northward toward the Southwest when favorable flow patterns develop.

# The 10 Standard Fire Orders <br> Operational Engagement Category 

The orders are arranged according to their importance and grouped in logical sequence. Review and consider Standard Fire Orders as a part of every shift.

- Did you receive or request adequate weather briefing, current and predicted fire behavior, wind direction, predicted humidity, fuel moisture, local factors?

Do you have map of the fire? Is topography, type of fuels, direction of the spread defined?

- Fire behavior group deals with what the firefighter will encounter - weather, fire status, fire behavior.

1. Keep informed on fire weather conditions and forecasts.
2. Know what your fire is doing at all times.
3. Base all actions on current and expected behavior of the fire.

- Are you familiar with direction, distance, location, size of escape routes and safety zones?
- Discuss the need for lookout, such as extreme fire behavior, fire located out of line-of-sight.
- Discuss importance of the situational awareness.
- Fireline safety group emphasizes personal safety.

4. Identify escape routes and safety zones and make them known.
5. Post lookouts when there is possible danger.
6. Be alert. Keep calm. Think clearly. Act decisively.

- Review importance and means of passing tactical decisions and resource movement.
- Review other factors influencing potential changes in tactics, which could affect control of your forces.
- Organizational Control group is centered around tactical decisions.

7. Maintain prompt communications with your forces, your supervisor and adjoining forces.
8. Give clear instructions and insure they are understood.
9. Maintain control of your forces at all time.

- After you have considered, discussed and acted on the previous nine orders:

10. Fight fire aggressively, having provided for safety first.
