* 1 Hectare = 2.47 Acres

Predictive Services Discussion: The high pressure ridge over the West will strengthen further and extend into Northern Canada. Beneath it, weak surges of monsoonal moisture will work their way north from New Mexico along the Continental Divide and will spread isolated to widely scattered wet and dry storms along the higher terrain and across the northern Great Plains. Temperatures across the entire west, except possibly western Washington, will be well above normal. In Alaska, a cold front will move on shore into northwestern portions of the state bringing an increase in shower activity. Right now it appears that the airmass will be stable, so lightning is not expected.

## Day 6 Getting Real About What's Normal

If you have crew leaders at a staging area, how many different opinions do you have? When was the last time you had zero communication problems? These are some of the friction points often cited as "contributing factors" after unintended outcomes. Are these rare occurrences or normal work conditions?

## How often do you face the following tensions?

## Difference of Opinion.

## Surprising Fire Behavior.

## Decisions Under Stress.

## Discuss the Following Questions:

- How likely is it that these tensions are present on your next fire?
- How much control do you have over these conditions?
- If nothing bad happens, are these conditions still "contributing factors"?
- How can you practice and improve on dealing with these conditions?

## Think. Talk. Listen.
