Predictive Services Discussion: The unusually large, hot ridge of high pressure over the West and Great Plains will continue to intensify. Hot conditions are expected across most of the west along with scattered thunderstorms. Humidity levels will generally be very low except across the southern Great Basin and the Southwest where monsoonal flow will keep conditions muggy. Scattered showers and storms are expected across the Southeast as a cold front slowly drifts southward into the Deep South. In Alaska, the ridge of high pressure over the interior will begin to flatten as a disturbance moves east along the Arctic Coast. Isolated showers and storms will be possible across the Brooks Range and the Alaska Range.

It's 1400...you have been working all morning. How far away have your safety zones become? Safety zones are only good if you can reach them. How long will your escape route take? What is the condition of the crew? How long will it take your slowest member to get there? Are your expectations realistic?

Look at the times below...if your fire blew up right now, can you and every member of your crew make it to your safety zone?

The "Take 5 @2" safety messages are a cooperative project of 6 Minutes for Safety, the Wildland Fire Safety Training Annual Refresher (WFSTAR), NIFC External Affairs, the NWCG Leadership Committee, the NWCG Risk Management Committee, and the Wildland Fire Lessons Learned Center.
