Predictive Services Discussion: The high pressure ridge over the southern Great Plains will begin to slowly strengthen and migrate westward toward its former position over the Four Corners. As it does so, the scattered wet convection will continue to redevelop over the Great Basin, Northern California, Oregon, and the Northern Rockies. Some moisture could drift over the Sierra Crest and into Central and Southern California but remain anchored over the mountains. Temperatures across the West will be slightly above normal. Significant winds are not expected today in most areas unless they are associated with thunderstorms outflows.

HAZARD TREE - RISK MANAGEMENT
Felling Safety Category

## Environment:

- Existing winds and forecast
- Night operations
- Steep slopes
- Diseased or bug-kill areas
- Number, density, and height of hazard trees
- Anticipated burn-down time
- Potential for domino effect to surrounding trees
- Maintain situational awareness and continually reassess hazards

## Hazard Tree Indicators:

- Trees burning for any period of time
- High risk tree species (rot and shallow roots)
- Numerous downed trees
- Dead, broken, or burning tops and limbs overhead
- Accumulation of downed limbs
- Absence of needles, bark or limbs
- Leaning or hung-up

Note: In addition to suppression and mop-up operations, assess, control, and monitor hazard trees along roads and when selecting break areas or campsites.

## - Hazard Control:

- Eliminate the hazards with qualified sawyers, blasters/explosives, or heavy equipment
- Avoid hazards by designating "No Work Zones" (NWZ) - (flag, sign, and map)
- Modify suppression tactics or fireline location to avoid extreme/high risk rated area
- Post lookouts to help maintain secure area
- Fire proof potential hazard trees to prevent ignition
- Initiate road/traffic control and area closure
- Keep clear of bucket drops near trees/snags
- Establish trigger points for reposition to secure areas in response to high winds
