Predictive Services Discussion: Similar conditions are expected across the Lower 48 today as the slowly weakening trough of low pressure along the coast of Northern California remains stalled. Scattered wet and dry convection is expected across Montana, Idaho, Wyoming, Washington, Oregon and northern Nevada along with slightly above normal temperatures. Mostly dry conditions are expected across California and central-southern Nevada while convection will begin to increase across the Four Corners by afternoon. In the East, expect near normal temperatures with an overall westerly flow. Scattered thunderstorms are possible across the southern Appalachians and across the Deep South as a weak disturbance moves east through the flow.

## TERRAIN AND FUELS MAKE ESCAPE TO SAFETY ZONES DIFFICULT

When fighting wildland fires, it is often easy to get committed to areas that put you in Watchout Situation \#17. As firefighters progress along the fireline, it is imperative to constantly keep the following considerations in mind:

- Base retreat times on the slowest member of the crew.
- Does the crew's condition allow for fast travel? Discuss physical and mental conditions that could interfere with a crew's ability to travel quickly.

Will you get adequate warning to make it to your safety zone? Who will you rely on to warn you? How will you ensure that everyone gets the word?

- Can escape routes be improved to make travel to safety zones faster? Are escape routes marked? Review what you have done on past fires to locate, mark, and improve escape routes.
- Will posting more lookouts give adequate warning? Talk about situations where there was more than one firefighter assigned to be lookout.
- To reduce the risks:
- Consider other tactics that will allow you to be in a safer location. Review fires where you have had to change tactics because escape to safety zones was not adequate.

Have an idea? Have feedback? Share it.
