Predictive Services Discussion: As the previous days' cold front very slowly moves further into the northern Great Plains, a breezy southwesterly flow will continue. Temperatures across the West will continue to be slightly below normal. Monsoonal convection will be limited to the Four Corners Region and to Wyoming mostly, though central Idaho could see some afternoon convection. Along the West Coast, an area of low pressure will develop along the coast of Northern California in the morning and will move south through the day. Expect a general off shore flow to develop. Scattered showers and storms will continue to be possible across the Southeast as a cold front remains stalled over the region. The Great Lakes Region and the Northeast will be warm and dry with temperatures near normal expected.

Burn Protocols

Firefighter Health \& First Aid

Burn injuries are often difficult to diagnose and may continue to worsen if they do not receive immediate, specialized treatment. The initial evaluation and treatment of these burns often happens in rural medical facilities with limited experience in burn injury care. In the past, this has resulted in evaluation and treatment that did not provide the best care to injured firefighters. Therefore, victims with either severe burns or burns that meet any of the below criteria should be immediately referred and transported to a regional burn center.

- Burn injury criteria identified by the American Burn Association as warranting immediate referral to an accredited burn center.
- Partial thickness burns (second degree) involving greater than 5\% Total Body Surface Area.
- Burns involving the face, hands, feet, genitalia, perineum, or major joints.
- Third-degree burns of any size are present.
- Electrical burns, including lightning injury are present.
- Inhalation injury is suspected.
- Burns are accompanied by traumatic injury (such as fractures).
- Individuals are unable to immediately return to full duty.
- It is imperative that action is expeditious, as burn injuries are often difficult to evaluate and may take 72 hours to manifest themselves. When there is any doubt as to the severity of the injury, the required action is to immediately refer and transport the employee to a regional burn center.
- To ensure that Workers Compensation assistance is provided an agency administrator, or designee, for the incident needs to coordinate with the firefighter's home unit.
- Do you know the location of the closest regional burn center?
