Predictive Services Discussion: Breezy conditions are expected across the Pacific Northwest and the Northern Rockies as a weak, dry cold front moves east across southern Canada and both regions. A weak trough of low pressure along the Pacific Coast will pull monsoonal moisture westward into the southern Great Basin and the Sierras in California. Expect isolated storms in those areas during the afternoon. A weak monsoonal flow will allow for the redevelopment of scattered wet storms across New Mexico and Colorado. A strong cold front will move east across New England bringing scattered showers and storms. Behind the front across the Great Lakes Region and the Ohio River Valley, a dry but breezy northwesterly flow will develop. Continued wet conditions are expected across the Deep South and Florida as a weak frontal boundary slowly moves southeast across the area.

AVIATION COMMUNICATIONS
Aviation Category

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows what it is.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
- How they work.
- When to use them.
- What frequencies are established for aircraft in your area?
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people you are talking to. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
