Predictive Services Discussion: An upper low off the California coast will draw moisture across the southern and central Rockies, the central and northern Great Basin, and into northern California and southern Oregon. Widely scattered to scattered thunderstorms will form across the southern and central Rockies, the southern Great Basin, and Sierras in the afternoon, and spread northward into northern California, the northern Great Basin, and southern Oregon Tuesday night. Some storms will produce locally moderate rain but most will produce less than $0.20^{\prime \prime}$. Warmer conditions will develop over the Northwest and northern Rockies. East of the Rockies, scattered showers and thunderstorms will form across the central Plains to the Great Lakes. Scattered thunderstorms will form along the Gulf Coast.

## ESCAPE ROUTES 3 (LCES) Operational Engagement Category

A primary objective of every operational fire plan is to keep firefighters out of entrapment situations. However, firefighters must always be prepared to escape quickly to a safety zone or deployment area. Consider the following during discussion of escape from possible entrapment.

- Have a plan that includes trigger points!
- Trigger Point: An observable event that triggers a pre-determined action. Example: Temperature reaches 98 Degrees and RH goes into single digests the crew will follow the established escape route to the safety zone.
- Reassess escape routes throughout the operational period.
- Has access to escape routes become more difficult as the day progresses?
- Do you have more than one escape route?
- Are all escape routes clearly marked?
- Are all firefighters familiar with the escape routes?
- During an escape time will be short. Describe considerations you might make in this situation such as:
- Maintain control of all critical equipment such as PPE and radio... jettison gear that will not aid in your escape!
- Maintain contact with all other crewmembers!
- Describe your vision of a good safely zone. How is that different from a deployment area?
- You should always know the location of your escape routes leading to and safety zones and deployment areas.
