Predictive Services Discussion: A cold front will push through the Northern Rockies and into the northern Great Basin. Isolated thunderstorms will be possible across southwestern Montana and western Wyoming and windy conditions will continue over the northern Rockies. Scattered showers and thunderstorms will move through the northern Plains to the Upper Midwest. Scattered showers and thunderstorms will stretch from New Mexico and Arizona to Florida. Hurricane Harvey will make landfall in the lower Texas coast, bringing heavy rain, hurricane force winds, and flooding to much of southern, central, and eastern Texas. Temperatures will begin warming in the West as high pressure builds. Mild conditions will continue over the Northeast and MidMississippi Valley.

## INITIAL ATTACK FIRE SIZEUP/SAFETY <br> Operational Engagement Category

Having a good sizeup is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting.

- Use the following reporting factors for size-up and reference local fire size-up cards. Discuss others that may be used.
- Fire name and location
- Terrain (slope, aspect, elevation) and position of fire on the slope
- Size of fire
- Fuel type, anticipated control problems, and spread potential
- Values threatened
- Weather conditions (wind speed and direction)
- Fire behavior
- Resources on the fire and those needed
- Estimated containment and control times
- Cause (known, suspected, under investigation)
- After your initial size-up of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.
- Have you sized up the fire and relayed the information to dispatch?
- Is the observed fire weather consistent with the forecast?
- Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
- Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
- Are lookouts in place or can you see all of the fire area?
- Can you communicate with everyone on the fire and with dispatch?
- Are escape routes and safety zones established? If you are using the black, is it completely burned and without a reburn potential?
- Are safety and the standard fire orders being followed and/or mitigated?
- Do you have a complete list of what resources have been ordered for the fire?
- Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
