Predictive Services Discussion: The ridge over the West will slide east as an upper low moves toward California. Moisture will move north along the West Coast, producing scattered showers and thunderstorms from northern California to western Washington. Widely scattered thunderstorms will form across eastern Oregon, Idaho and western Montana late in the day. Scattered thunderstorms will continue across the Four Corners states. A cold front will enter the Northwest, ushering in cooler conditions. Smoke will remain trapped in many valleys of the northwestern U.S. but most will be cleared by the frontal passage. High pressure in the East will keep cool to mild conditions from the Mississippi Valley to the East Coast. Windy and stormy conditions begin to affect south Florida as Hurricane Irma approaches.

# BASE ALL ACTIONS ON CURRENT AND EXPECTED FIRE BEHAVIOR 

Weather / Fire Behavior Category

- Can the resources you are replacing give you a thorough briefing? What information will you want to get from resources you are replacing?
- Can you observe the area or use scouts? What information are the scouts looking for?
- Have escape routes and safety zones been thoroughly scouted? List some ways your crew will scout out an area before you begin working
- Are escape routes and safety zones marked for night use? How do you adjust marking safety zones and escape routes for night use?
- Have potential dangers been located and can they be dealt with? List some dangerous fire behavior you may encounter and how you would deal with it.

Do you have access to weather and fire behavior forecasts? What is your unit's procedure for obtaining forecasts?

- To reduce risk, initiate the following:
- Post lookouts.
- Check communications.
- Retreat if you have doubts about your escape routes or safety zones or it the situation becomes too complex. Discuss fires where you have adjusted your actions based on current and expected fire behavior.

How would you judge the fire season? (Above normal, below, or average.)
