Predictive Services Discussion: Snow will be possible in the higher elevations in Montana as the upper level low pressure area moves further inland. Temperatures across the West will experience additional cooling from this cold system. Significant rainfall is expected in the lower elevations across the Northern Rockies, eastern Washington and Oregon, and the northern Great Basin. Looking elsewhere, a warm, breezy, and dry southwesterly flow will continue across the Southwest. Meanwhile in the East, attention will turn from the remnants of Irma over the mid-Atlantic to Hurricane Jose as it begins its march toward the East Coast.

UNFAMILIAR WITH WEATHER AND LOCAL FACTORS INFLUENCING FIRE BEHAVIOR

Weather / Fire Behavior Category

- Ask questions of local experts! What kinds of questions would you ask?
- Does the operational period plan give you adequate weather and information? What kinds of weather forecasts can you get? What other weather or local information do you look for in the shift plan?
- Can you get information from resources that have been on the fire? What questions will you ask of the crew that you are replacing?
- Is there any other way to obtain information? List common sources of information on weather and local factors (Examples: Web based weather Activity Planner, Point Forecast Matrix, NOAA Internet Briefing)
- To reduce risks:
- Base all actions on current and expected fire behavior.
- Post lookouts.
- Establish escape routes and safety zones.
- Take extra caution! Discuss a fire where you relied on information from the local unit (perhaps where your fire knowledge and experience was very different from how they did things-southeast or Alaska).
- Recognize and report visual indicators (clouds, WX obs., cold front passage, inversion breaking
