Predictive Services Discussion: Breezy conditions are expected across the central Rockies as the upper level trough to the north begins to move from the northern Rockies into the Great Plains. Cooler than normal conditions will continue across the western states from the Canadian border south to Mexico as a large upper level trough lingers over the West. Overall, conditions will be drier behind the system except along the Pacific Northwest coast where an even stronger and colder system will begin its approach. Though cooler, afternoon humidities will be low and could promote active burning across the Great Basin and California. In the East, Jose will take a northerly turn and begin tracking parallel to the Atlantic Coast off Cape Hatteras.

## ENTRAPMENT AVOIDANCE

Operational Engagement Category

Avoiding situations where firefighters become entrapped is the first concern when devising strategy and tactics. The following discussion points are among the things that should be considered.

- Discuss the three types of safety zones and describe examples.
- The burn
- Natural features
- Constructed sites
- Discuss the guidelines for distance separation to avoid radiant heat injury.
- Four times the maximum flame height ( 20 feet-flame height $\times 4=80$ feet radius from firefighters)
- Discuss size based on amount of resources and equipment in the area.
