Predictive Services Discussion: Breezy conditions will develop across the northwestern states as the next system begins to move on shore. Widespread wetting rainfall is expected by mid-day in the Cascades. By midafternoon, cloud cover will begin to increase across the Northern Rockies and the Great Basin. Temperatures will again be below normal across the West, but could be as much as 20 degrees below normal across the Pacific Northwest. For the most part, California will miss out on the approaching precipitation as conditions remain dry. Looking elsewhere, a breezy southwesterly flow will continue across the Great Plains, extending as far east as the Great Lakes region. Meanwhile, Jose will continue a slow northward track off the East Coast.
