*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.
***Additional wildfire information is available through the Geographic Areas at http://gacc.nifc.gov/

Predictive Services Discussion: The persistent upper level low pressure trough will finally begin to weaken over the West and will allow for the precipitation to decrease in coverage. A drier, northerly flow will develop along the West Coast and will allow for temperatures to begin to moderate. However, temperatures will still be well below normal from the Continental Divide west to the Pacific Ocean. Over the East, well above normal temperatures are expected under mostly sunny skies as a high pressure ridge strengthens between the weakening trough to the west and the two tropical systems located to the east. Breezy southerly winds are expected across the Great Plains as a frontal boundary becomes better developed.

## WORKING WITH HELICOPTER DROPS

Aviation Category

Consider the following questions when you have a helicopter with a bucket working in your area:

If the helicopter is a Type 1 increase the distance of standby place from the drop zone.
Use helicopter drops to knock down or secure a fire area that poses a direct imminent threat to escaping control lines or climbing up ladder fuels.

- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What are the winds doing?
- What is the turnaround time for the helicopter?
- Are people on the ground aware of the effects of the helicopter's rotorwash?
- Give feedback to the pilot about drop accuracy. Be honest and constructive.
- Be aware that helicopter performance capabilities may be significantly reduced at high altitudes and/or high temperatures.
