*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.
***Additional wildfire information is available through the Geographic Areas at http://gacc.nifc.gov/

Predictive Services Discussion: A ridge of high pressure will begin to build inland into the Pacific Northwest as the upper level trough over the West continues to weaken and move east toward the Great Plains. Temperatures will rise to near normal levels west-wide as skies clear in most areas. That said, scattered showers will continue in the North Cascades as a weak disturbance moves overtop the approaching ridge. Northerly or northeasterly winds over California will create a dry off shore flow that could further dry the fine fuels and elevated fire danger. Looking east, scattered showers and thunderstorms will be possible across the Great Plains as a cold front moves east from the Rockies. Along the East Coast, eyes will be on Hurricane Maria as it moves north off the Carolina Coast.

Fuel Handling

Miscellaneous Fireline Hazards

## Fuel Handling - Watch Out for "Normalization"

There is an apprehension that the safety concerns surrounding the use of gasoline in firefighting operations can get "normalized". In firefighting, we use gasoline for a variety of applications, including: pumps, chainsaws, vehicles, drip torches, etc.
"Normalization" of hazards or risks is when we get comfortable around these hazards and take shortcuts without consequence. After a while, we can get so comfortable with these shortcuts that we forget about the original mitigation to reduce the hazard or risk.

1. What do we use gasoline for in our firefighting operations?
2. What risks are associated with our uses of flammable liquids?
3. What mitigations or procedures are in place for handling fuel?
4. What can you do to prevent being sprayed or doused in gasoline from gas tank pressure?
5. What should you do to extinguish someone who is on fire?
