

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, December 22, 2017 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity**

Initial attack activity: Light (47) new fires  
 New large incidents: 0  
 Large fires contained: 0  
 Uncontained large fires:\*\* 1  
 Area Command teams committed: 0  
 NIMOs committed: 0  
 Type 1 IMTs committed: 3  
 Type 2 IMTs committed: 0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.  
[Link](#) to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will be posted every Friday at 0800 Mountain Standard Time unless significant activity occurs.

\*\*\* Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** The weekend will begin with the redevelopment of a ridge of high pressure over the western states and a strong, windy, and cold trough of low pressure over the eastern states. Low elevation temperature inversions are expected to redevelop; however, they will not be as strong or as long-lasting as the previous event. While colder and drier than average conditions are expected across the central and eastern portion of the country, the conditions will not be long-lived. By Monday, the atmospheric flow pattern will begin to flatten out as both the ridge and trough begin to weaken. A moist and cool storm system will move into the Pacific Northwest and the Northern Rockies late Monday. By mid-week, the system will stall over the Northern Rockies and the Great Basin and intensify. The strengthening system will create an strengthened on shore flow in California and will pump much needed moisture into the Southwest and the Great Plains on Wednesday and Thursday. In Alaska, overall dry and warmer than normal conditions are expected as an overall southerly flow continues over the state; however, a downward trend in temperatures is expected as a strong low pressure area over Siberia moves closer to the Bering Strait by Tuesday.

## Working with Helicopter Drops

*Aviation Category*

Consider the following questions when you have a helicopter with a bucket working in your area:

If the helicopter is a Type 1, increase the distance of standby place from the drop zone.

Use helicopter drops to knock down or secure a fire area that poses a direct imminent threat to escaping control lines or climbing up ladder fuels.

- Do you have good communications?
- Does the pilot have a clear understanding of the target?
- Are trees and snags in the drop zone?
- Are ground crews clear of the area?
- What are the winds doing?
- What is the turnaround time for the helicopter?
- Are people on the ground aware of the effects of the helicopter's rotor wash?
- Give feedback to the pilot about drop accuracy. Be honest and constructive.
- Be aware that helicopter performance capabilities may be significantly reduced at high altitudes and/or high temperatures.
