

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, February 2, 2018 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity**

Initial attack activity:	Light (410) new fires
New large incidents:	20
Large fires contained:	9
Uncontained large fires:**	8
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 1)**

New fires:	363
New large incidents:	16
Uncontained large fires:	8

\* **Windmill**, Osage Agency, BIA. Two miles southeast of Shidler, OK. Tall grass and timber. Extreme fire behavior with running. Residences threatened.

**62**, Texas A & M Forest Service. Twelve miles east of Matador, TX. Short grass and brush. Minimal fire behavior.

\* **Midnight**, Eglin Air Force Base. Four miles northeast of Holley, FL. Timber. Moderate fire behavior. Last report unless significant activity occurs.

\* **Split Trough 2**, Texas A & M Forest Service. Started on private land six miles east of Goliad, TX. Brush. Minimal fire behavior with smoldering.

\* **Nursery Road**, Texas A & M Forest Service. Twelve miles south of Victoria, TX. Tall grass and brush. Minimal fire behavior. Structures threatened.

\* **East Side 2**, Osage Agency, BIA. Twelve miles west of Skiatook, OK. Tall grass. Extreme fire behavior with running and spotting. Structures threatened.

\* **Stidham Creek**, Okmulgee Agency, BIA. Five miles west of Dustin, OK. Timber and tall grass. Active fire behavior with running, single tree torching and short-range spotting. Structures threatened.

\* **Rogue Dozer**, Okmulgee Agency, BIA. Four miles southwest of Kellyville, OK. Timber and tall grass. Active fire behavior with uphill runs, single tree torching and short-range spotting. Structures threatened. Last report unless significant activity occurs.

\* **2073 Command**, Oklahoma Division of Forestry. Seven miles southwest of Kellyville, OK. Timber. Minimal fire behavior with smoldering.

\* **East 8 Mile**, East Central Area, Oklahoma DOF. Seven miles northwest of Talihina, OK. Hardwood litter and short grass. Moderate fire behavior with wind driven runs. Structures threatened.

\*\*\* **Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** The forecast begins with yet another cold trough of low pressure over the eastern two thirds of the nation and a warm ridge of high pressure centered along the Pacific Coast. In between the two a pair of weak disturbances is moving south from British Columbia into Montana and Wyoming bringing more snowfall to the mountains and a mix of rain and snow to the valleys. By Saturday, the first of the two systems will begin tapping onto another surge of Arctic air as it moves east southeast across the Great Plains toward the Great lakes. By Super Sunday, the first system will move into the northeast and will bring another round of moderate snowfall to the upper Mid-Atlantic States while the second system dives south into the central Great Plains and pulls the cold air south while pushing the ridge of high pressure along the Pacific Coast further off shore. By Monday and Tuesday a very large, broad upper level trough will be in place over the entire Lower 48 with warm temperatures being observed only along the southern and western boundaries of the system. By Wednesday and Thursday, the trough will migrate eastward a bit as the ridge of high pressure pushes back on shore. Winds across Northern California may become breezy and dry from the North mid-week, and off shore winds are possible across Southern California as well. However, extreme

events are not expected at this time. Further warming is expected along the West Coast as mountain snowpacks remain depleted except across Washington, Northern Idaho, and Montana.

In Alaska, a ridge of high pressure dropping southeast from the Arctic Ocean will be the dominant feature in the weather over the next week. Expect over all dry but cold conditions to continue. While cold, this system is not expected to be unusually cold. Best chances for snowfall will be along the southwestern coast of the state and across the Aleutian Islands where the Aleutian Low will continue to pump weak disturbances northward into the Bering Strait next week.

## Extended Attack

*Operational Engagement Category*

After your initial size-up of the fire and/or transfer of command from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in fire conditions.

- Do you have a current fire weather forecast for the fire location?
- Is the observed fire weather consistent with the forecast?
- Have you established a new organizational structure and communicated it to the other forces associated with the fire?
- Can you control the fire with the resources available (either on the incident or soon to be on the incident) under expected conditions?
- Have you developed a plan to attack the fire?
  - Direct or indirect
  - Anchor points
  - Escape routes
  - Head or flank attack
  - Priority areas
- Have you communicated this to all personnel assigned to the incident, including new arrivals?
- Can you see all of the fire area?
- Can you communicate with everyone on the fire and with dispatch?
- Are escape routes established?
  - If you are using the black, is it completely burned and without a reburn potential?
- Are safety and the standard fire orders being followed and/or mitigated?
- Will you contain the fire before the next operational period?
- Have you reported the status of the fire to dispatch?
- Do you have a complete list of what resources have been ordered for the fire?
