

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, March 2, 2018 – 0800 MT  
National Preparedness Level 1**

**National Fire Activity**

Initial attack activity: Light (338) new fires  
 New large incidents: 9  
 Large fires contained: 7  
 Uncontained large fires:\*\* 2  
 Area Command teams committed: 0  
 NIMOs committed: 0  
 Type 1 IMTs committed: 0  
 Type 2 IMTs committed: 0

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

\*\*\* Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** A couple of strong low pressure systems will affect the northern portions of both the Pacific and Atlantic coasts. In the West, a broad, snowy system will bring additional snowfall to the mountains from central California and Nevada north into Canada. In the East, a strong eastward moving area of low pressure will bring moderate to heavy precipitation to the Mid-Atlantic States and New England. In between the two system, a strong ridge of high pressure will remain entrenched over the Great Plains. Moving ahead into the weekend, the low pressure area along the Pacific Coast will drift inland into the Northern Rockies and will pull cold air south to the Intermountain West while the high pressure ridge over the Great Plains moves toward the East Coast. Pockets of critical fire weather conditions will be possible across the southern Plains in between the systems as gusty winds and low humidity develop. As the low pressure system continues to move east through midweek, it will gather moisture from the Gulf of Mexico and strengthen. Significant snow is possible along the Great Lakes region and strong storms will be possible across portions of the South. In the West a warming ridge of high pressure will move on shore and will produce a change in the weather pattern...finally. In Alaska, a pair of weak high pressure ridges will produce dry conditions with near normal temperatures through the weekend. A very weak low pressure area along the northern Alaskan Gulf Coast will bring moderate snowfall amounts to coastal ranges early next week. However, the Interior should remain mostly dry through the week.

## Operational Briefings

*Fire Communications Category*

Operational briefings are critical to safe fire operations. To ensure a consistent and effective briefing, a standardized briefing checklist should always be used. The following checklist is printed on the cover of the NWCG Incident Response Pocket Guide:

- Situation:
  - Fire name, location, map orientation, other incidents in the area
  - Terrain influences
  - Fuel type and conditions
  - Fire weather (previous, current, and expected)
  - Fire behavior (previous, current, and expected)
  
- Mission/Execution:
  - Command (Incident Commander/immediate supervisor)
  - Leader's intent
  - Specific tactical assignments
  - Contingency plans
  
- Communications:
  - Communication Plan (tactical, command, air/ground frequencies, cell phone numbers, etc.)
  - Medevac Plan
  
- Service/Support:
  - Other resources that may be working adjacent to you and those available to order
  - Aviation operations
  - Logistics (e.g., transportation, supplies, equipment)
  
- Risk Management:
  - Identify known hazards and risks
  - Identify control measures to eliminate hazards and reduce risk
  - Identify trigger points for disengagement or reevaluation of operational plan
