# National Interagency Coordination Center Incident Management Situation Report 

Friday, March 16, 2018 - 0800 MT
National Preparedness Level 1

## National Fire Activity

Initial attack activity:
New large incidents:
Light (663) new fires
Large fires contained: 48

Uncontained large fires:** 32

Area Command teams committed: 0
NIMOs committed:
0
Type 1 IMTs committed:
0
Type 2 IMTs committed:
0
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

## Southern Area (PL 2)

New fires: 568
New large incidents:
Uncontained large fires:

* County Line, Texas A \& M Forest Service. Started on private land four miles southeast of Channing, TX. Tall grass. Active fire behavior with running.
* Maple, Oklahoma DOF. Ten miles south of Calumet, OK. Tall grass, timber and brush. Active fire behavior with running and flanking.

[^0]* Anhinga, Big Cypress National Preserve, NPS. Twenty miles east of Naples, FL. Southern rough and short grass. Minimal fire behavior with smoldering. Structures threatened. Area and trail closures in effect.

Faka-Union (11), Florida Forest Service. One mile northwest of Port of the Islands, FL. Southern rough. Minimal fire behavior. Reduction in acreage due to more accurate mapping.
*Begs, Texas A \& M Forest Service. Started on private land nine miles northwest of Sundown, TX. Active fire behavior with creeping. Residences threatened.

* Flying G, Okmulgee Field Office, BIA. Two miles west of Sand Springs, OK. Tall grass. Moderate fire behavior. Numerous structures threatened.
* Blue Creek \#2, Oklahoma DOF. Ten miles northeast of McAlester, OK. Tall grass and hardwood litter. Active fire behavior with running and flanking.
* Gravel Pit, Texas A \& M Forest Service. Started on private land 19 miles north of Amarillo, TX. Tall grass and brush. Active fire behavior with running. Residences threatened.
* Cumbee, Francis Marion \& Sumter NF. Nine miles east of Huger, SC. Southern rough and brush. Minimal fire behavior with creeping, backing and smoldering.
* Circle K, Oklahoma DOF. Five miles northwest of Skiatook, OK. Tall grass and brush. Minimal fire behavior with smoldering.
* East Cupco, Oklahoma DOF. Thirty-three miles southeast of McAlester, OK. Hardwood litter, short grass and timber. Active fire behavior with uphill runs and flanking.
* Coffee Ridge, Oklahoma DOF. Twenty-nine miles east of McAlester, OK. Timber and short grass. Active fire behavior with uphill and wind driven runs.
* Graveyard Hill, Oklahoma DOF. One mile west of Ochelata, OK. Tall grass and brush. Minimal fire behavior with smoldering. Numerous structures threatened. Road closures in effect.
* Blue Branch, Oklahoma DOF. Twenty-seven miles southwest of Fort Smith, AR. Hardwood litter and timber. Active fire behavior with wind driven runs.
* Bombing Range 2, National Forests in Florida, Forest Service. Fifteen miles north of Umatilla, FL. Southern rough. Minimal fire behavior. Last report unless significant activity occurs.
* Cimarron, Oklahoma DOF. Nine miles northeast of Selmon, OK. Tall grass and brush. Minimal fire behavior with smoldering.
* Cleora, Oklahoma DOF. Two miles west of Cleora, OK. Hardwood litter. Active fire behavior with running and flanking.
* Wild Horse, Oklahoma DOF. Twenty-three miles southeast of McAlester, OK. Timber and short grass. Active fire behavior with wind driven runs and backing.
* Cowskin Ridge, Oklahoma DOF. Twenty-five miles south of Fort Smith, AR. Timber and short grass. Active fire behavior with uphill runs, wind driven runs and isolated torching.

Mini Ranch RD (28), Florida Forest Service. Four miles southeast of Sebring, FL. Timber. Minimal fire behavior. Structures threatened.

* Lowe, Okmulgee Field Office, BIA. Twelve miles west of Sapulpa, OK. Short grass. Minimal fire behavior. Structures threatened. Last report unless significant activity occurs.
* Cement Mixer, Oklahoma DOF. Thirty-six miles southeast of McAlester, OK. Hardwood litter. Active fire behavior with running.
* Cupco South, Oklahoma DOF. Thirty-two miles southeast of McAlester, OK. Timber. Moderate fire behavior with creeping and wind driven runs.
* South Boat Ramp, Oklahoma DOF. Nineteen miles northeast of McAlester, OK. Hardwood litter and short grass. Moderate fire behavior with wind driven runs.

## Predictive Services Discussion:

A pair of cool, moist systems will impact the West Coast and central Great Plains Friday with wetting precipitation. Additional mountain snowfall is expected across the Southern Cascades and Sierras. To the south, critical fire weather conditions are possible across portions of eastern New Mexico, southeastern Colorado, and the panhandle regions of Texas and Oklahoma as gusty west winds interact with low humidities. By late Saturday, both systems will weaken as they move east and should fall apart; however, showery conditions will continue across the Pacific Northwest and the Northern Rockies. A warming trend will ensue across the West Monday and Tuesday as a high pressure ridge strengthens just west of the Rocky Mountain Crest and pushes temperatures back to near average levels. Model data suggests that significant, widespread wetting rainfall will be possible Wednesday and Thursday across most of the West as a moist system approaches the California Coast and moves on shore into Southern California and Arizona on Thursday. Prior to the system's arrival, a period of very critical fire weather conditions will be possible across the southern Great Plains on Wednesday as high winds and very low humidities develop out ahead of the system. In

Alaska, a pair of weakening cold fronts will move east across the Interior bringing additional light to moderate snowfall through the weekend. A drier southwesterly flow will develop by Monday and Tuesday. Look for a slight cool down mid-week as the flow becomes more northwesterly in response to a strengthening ridge over the Aleutians and eastern Siberia.

Propane Tank Safety<br>Miscellaneous Fireline Hazards

Liquefied Propane Gas (LPG) tanks are commonly found in the wildland-urban interface and present hazards to firefighters in that environment. LPG tanks may be found in a number of other environments such as motor homes, travel trailers, grills, camp stoves, lanterns, etc. Directly attacking LPG tank fires is a structural fire task involving hazardous materials and should only be attempted by trained personnel using full structural personal protective equipment and equipped with a volume of water adequate to safely attack the fire.

- Boiling Liquid Expanding Vapor Explosions (BLEVE)
- The most recognized hazard with LPG tanks is BLEVE (Boiling Liquid Expanding Vapor Explosions) or sudden complete failure of the tank. Some training courses have directed responders to approach the tank from the sides, believing that the force of the explosion will occur on the ends of the tank. However, this is not a guarantee that you will be safe from projectiles or missiles from the explosion, as they may travel in ALL directions up to 2,500 feet away. Leave the area immediately if you smell propane; hear a rising sound from venting safety devices or see discoloration or deformation of the tank. If you leave the area, get at least 2,500 feet away and do not go down wind or down slope of the leaking propane. BLEVEs are a major hazard to emergency responders!
- Fuel Reduction Around Tanks
- Wildland firefighters may take action to prevent direct flame impingement on LPG tanks by removing wildland fuels in the area. However, be aware that lines from the tank to structures may be above or below ground, and may be cut by tools or equipment. Propane gas is heavier than air, and may move along the ground at some distance, and may ignite when in reaches open flame or another ignition source. Use extreme caution when doing fuels reduction around tanks, and flag any lines you encounter.
- Other Wildland Fire Considerations
- Do not position engines or other apparatus near LPG tanks or downwind / down slope from tanks.
- Do not deploy fire shelters near LPG tanks or downwind / down slope from tanks.
- Cooling Tanks
- In light fuels such as grasses, where any heat exposure to the tank will be very limited, rapid application of cooling water on the outside of the tank above the liquid level can reduce the likelihood of container failure by lowering the external temperature of the shell of the exposed tank. Water should not be directed at the valve safety devices, due to the potential of "icing" the valve closed.
- In heavy fuels where long duration heat exposure to the LPG tank is likely, evacuate all personnel and equipment 2,500 feet away and not down slope or down wind. NFPA says that direct flame impingement protection requires water flow of at least 500 gpm from an unmanned monitor nozzle. This is a situation for properly trained, equipped and supported structural firefighters.

Resources: Propane Safety Web Site, NIOSH Web Site, National Propane Gas Association's Web Site, NFPA Web Site

[^0]:    * Clear Lake, National Forests in Florida. Four miles southwest of Tallahassee, FL. Southern rough. Active fire behavior with flanking and backing. Last report unless significant activity occurs.

[^1]:    * Rice County, Rice County. Nine miles northwest of Inman, KS. Short grass and timber. Active fire behavior. Structures threatened.
