

**National Interagency Coordination Center  
Incident Management Situation Report  
Saturday, April 21, 2018 – 0800 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial attack activity: Moderate (206) new fires  
 New large incidents: 3  
 Large fires contained: 2  
 Uncontained large fires:\*\* 13  
 Area Command teams committed: 0  
 NIMOs committed: 0  
 Type 1 IMTs committed: 2  
 Type 2 IMTs committed: 2

\*Nationally, there are 2 fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Southern Area (PL 3)**

New fires: 170  
 New large incidents: 2  
 Uncontained large fires: 8  
 Type 1 IMTs committed: 1  
 Type 2 IMTs committed: 1

**Rhea**, Oklahoma DOF. Florida IMT 1 (Mousel). One mile west of Rhea, OK. Tall grass and brush. Active fire behavior with short crown runs. Numerous residences threatened.

**34 Complex**, Oklahoma DOF. IMT 2 (Parrish). Six miles north of Woodward, OK. Tall grass and brush. Minimal fire behavior with smoldering and creeping. Numerous residences threatened.

**McClellan**, Texas A&M Forest Service. Started on Forest Service land fourteen miles west of Groom, TX. Grass and brush. Minimal fire behavior with smoldering.

**Gate Mountain**, George Washington & Jefferson NF. Eight miles west of Timberville, VA. Hardwood litter and brush. Minimal fire behavior with backing, creeping and smoldering. Residences threatened.

**Bar 2**, Osage Agency, BIA. One mile north of Blackburn, OK. Timber and brush. Extreme fire behavior. Structures threatened.

\* **Rattlesnake Holler**, Northeast Area, Oklahoma DOF. Four miles southwest of Jay, OK. Timber. Moderate fire behavior with wind driven runs and flanking.

**Spoonbill**, Big Cypress National Preserve, NPS. Thirty miles east of Naples, FL. Southern rough and tall grass. No new information. Last report unless new information is received.

**Mashunkashey**, Osage Agency, BIA. Three miles north of Pawhuska, OK. Short grass and hardwood litter. No new information.

**Buzzard**, Big Cypress National Preserve, NPS. Previously reported incident. Twenty-five miles northeast of Ochopee, FL. Southern rough, timber and tall grass. Moderate fire behavior with running, backing and flanking. Area and trail closures in effect. Last report unless significant activity occurs.

\*\*\* Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

\*\*\*Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

**Predictive Services Discussion:** Critical fire weather conditions will continue today across portions southern New Mexico and West Texas in the wake of the low pressure area and will be moving east across the southern Great Plains. While not as critical as previous days, the breezy and dry northwesterly flow will be impactful on existing or emerging fires. As the cold front associated with the low pressure area moves toward the Mississippi River, severe storms will be possible. Looking elsewhere, high pressure will begin building across the West. This will produce a warming trend along with lighter winds. In Alaska, high pressure will build into the eastern Interior from the Yukon Territory while a low pressure area forms along the remnants of a cold front over the southwestern Interior. Expect snowy conditions across the southwestern Interior while other non-coastal areas remain dry. <http://www.predictiveservices.nifc.gov/outlooks/outlooks.html>

## Vehicle Entrapment

*Vehicles/Roads Category*

If you find yourself in a fire entrapment situation where a shelter deployment is not possible, using a vehicle for refuge may be an option. The following are some considerations for a vehicle entrapment:

- Park the vehicle in an area void of vegetation.
- Burn out around the vehicle if there is time.
- Park behind a natural barrier or structure. Consider that a structure could become involved which could severely impact nearby exposures/vehicles ([Harris Fire, SoCal, 2007](#)).
- Do not park on the downhill side of a road or under power lines or over-hanging vegetation.
- Stay out of saddles and draws.
- Position the vehicle in a direction that provides the area occupied by crew personnel the maximum protection from an approaching flame front.
- Set the parking break, leave the motor running at high RPM, and keep the vehicle lights on.
- Roll up the windows and do not lock the doors since someone else might need to get in.
- Cover windows with fire shelters with reflective material placed against window.
- You must protect your airway; remain as low in the vehicle as possible, and use a dry bandana to cover your nose and mouth.
- Expect the following conditions if you are trapped inside the vehicle:
  - Temperatures may reach over 200 degrees Fahrenheit.
  - Smoke and sparks may enter the vehicle.
  - Plastic parts may start to melt and give off toxic gases.
  - Windows may start to crack.
  - Exposed skin may receive radiant heat burns.
- If the vehicle catches fire, or windows blow out, and you must exit the vehicle before the fire has passed, then:
  - Each crewmember should cover themselves with a fire shelter.
  - Exit the vehicle from the side away from the greatest heat.
  - Stay together and get as low to the ground as possible, moving away from the vehicle.
  - Deploy your shelter in a safe area.
