

**National Interagency Coordination Center
Incident Management Situation Report
Sunday, May 6, 2018 – 0800 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (112) new fires
New large incidents:	0
Large fires contained:	1
Uncontained large fires:**	10
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	2
Type 2 IMTs committed:	1

Nationally, there are 2 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires:	37
New large incidents:	0
Uncontained large fires:	6
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

McDannald, Texas A&M Forest Service. IMT 1 (Dueitt). Started on private land 21 miles west of Ft. Davis, TX. Tall grass. Moderate fire behavior with single tree torching and backing. Numerous residences threatened. Area closures in effect.

Avian Complex, Big Cypress National Preserve, NPS. IMT 2 (Parrish). Fifteen miles northeast of Everglades City, FL. Southern rough and tall grass. Active fire behavior with running, flanking and backing. Numerous structures threatened. Area and trail closures in effect. Precipitation occurred over the fire area yesterday.

Tye River, George Washington & Jefferson NF. One mile southeast of Vesuvius, VA. Hardwood litter and brush. Active fire behavior with uphill runs, torching and short-range spotting. Structures threatened. Road, area and trail closures in effect.

Little Shepherds Trail, Kentucky DOF. Two miles north of Cumberland, KY. Hardwood litter and timber. Minimal fire behavior.

Belfast Keller Rd, Georgia Forestry Commission. Five miles southwest of Richmond Hill, GA. Southern rough and brush. No new information.

Tressel, Kentucky Private Lands. Three miles southeast of Kite, KY. Hardwood litter and light logging slash. No new information.

Brushy, George Washington & Jefferson NF. Five miles northwest of Bland, VA. Hardwood litter and closed timber litter. No new information.

*** Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: As the low pressure area along the coast of Oregon moves on shore, showers and wet storms will spread into the central and northern Great Basin. Along the southern Great Basin and northern Arizona, conditions will be breezy and dry and could create critical fire weather conditions in the afternoon. Widely scattered storms will be possible across the northern portion of New Mexico and the southern portion of Colorado. Temperatures across the West will be cooler as the ridge of high pressure moves into the Great Plains. In the East, cooler conditions will also be present as an upper level trough deepens over states east of the Mississippi River. Critical fire weather conditions may be possible across parts of Wisconsin and Minnesota as a breezy northwesterly, dry flow develops. In Alaska, the cool and showery pattern will continue across the state's interior.

Ash Pit Hazards

Miscellaneous Fireline Hazards

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when a ground fire consumes underground fuels creating an empty space that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards or decking areas.
 - Small rodent holes that have become filled with decadent combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
 - White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground.
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.

- Mitigation measures to consider:
 - Identification of high risk landscape.
 - Identify and flag all hazardous discovered ash pits.
