

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, May 15, 2018 – 0800 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (180) new fires
New large incidents:	2
Large fires contained:	4
Uncontained large fires:**	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Nationally, there are 5 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires:	93
New large incidents:	0
Uncontained large fires:	2
Type 1 IMTs committed:	1
Type 2 IMTs committed:	1

Mallard, Texas A&M Forest Service. IMT 1 (Dueitt). IMT is also managing the McDannald incident. Started on private land 13 miles east of Wayside, TX. Brush and short grass. Active fire behavior with torching and running. Numerous structures threatened. Evacuations in effect.

Avian Complex, (three fires), Big Cypress National Preserve, NPS. IMT 2 (Parrish). Fifteen miles northeast of Everglades City, FL. Southern rough and tall grass. Minimal fire behavior. Numerous residences threatened. Road, area and trail closures in effect. Precipitation occurred over the fire area yesterday.

Prairie Dog Fork, Texas A&M Forest Service. Started on private land sixteen miles northeast of Silverton, TX. Tall grass and brush. Minimal fire behavior with backing and creeping.

Southwest Area (PL 3)

New fires: 3
 New large incidents: 2
 Uncontained large fires: 4

* **Sombrero**, Southeast District, Arizona State. Fifteen miles east of Mammoth, AZ. Brush and short grass. Moderate fire behavior with smoldering.

* **Woods**, Apache-Sitgreaves NF. Eight miles northeast of Kohls Ranch, AZ. Timber, short grass and medium logging slash. Minimal fire behavior. Structures threatened.

Rattlesnake, Fort Apache Agency, BIA. Previously reported incident. Twenty-four miles southwest of Alpine, AZ. Timber, short grass and heavy logging slash. Minimal fire behavior. Road, area and trail closures in effect.

Tinder, Coconino NF. Twenty miles northeast of Pine, AZ. Timber. No new information.

Pinery, Coronado NF. Six miles southwest of Hilltop, AZ. Brush, tall grass, and timber. Last narrative report unless significant activity occurs.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Services Discussion: The low pressure area over the Intermountain West will continue to weaken. As this occurs, the moist atmosphere across Northern California, Oregon, Idaho, northern Nevada, Wyoming, and southern Montana will become increasingly unstable. This will allow for scattered wet storms to develop by afternoon. Marginally critical fire weather conditions will continue across Arizona. Isolated dry convection will be a concern across New Mexico. West Texas can also expect convection; however, storms there should be wet. Looking elsewhere, a tropical low in the northeastern Gulf of Mexico will feed moisture northward into a stationary front located over the Ohio River Valley. This should produce scattered storms across the Appalachians Mountains from Central Pennsylvania south into northern Georgia. In Alaska, the low pressure area centered over Nome will continue to create a southerly flow that will produce above average temperatures and scattered showers across the state's interior.

Burn Protocols

Firefighter Health & First Aid

Burn injuries are often difficult to diagnose and may continue to worsen if they do not receive immediate, specialized treatment. The initial evaluation and treatment of these burns often happens in rural medical facilities with limited experience in burn injury care. In the past, this has resulted in evaluation and treatment that did not provide the best care to injured firefighters. Therefore, victims with either severe burns or burns that meet any of the below criteria should be immediately referred and transported to a regional burn center.

- Burn injury criteria identified by the American Burn Association as warranting immediate referral to an accredited burn center.
 - Partial thickness burns (second degree) involving greater than 5% Total Body Surface Area.
 - Burns involving the face, hands, feet, genitalia, perineum, or major joints.
 - Third-degree burns of any size are present.
 - Electrical burns, including lightning injury are present.
 - Inhalation injury is suspected.
 - Burns are accompanied by traumatic injury (such as fractures).
 - Individuals are unable to immediately return to full duty.
- It is imperative that action is expeditious, as burn injuries are often difficult to evaluate and may take 72 hours to manifest themselves. When there is any doubt as to the severity of the injury, the required action is to immediately refer and transport the employee to a regional burn center.
- To ensure that Workers Compensation assistance is provided an agency administrator, or designee, for the incident needs to coordinate with the firefighter's home unit.
- Do you know the location of the closest regional burn center?
 - <http://www.blm.gov/nifc/st/en/prog/fire/im.html>
