

**National Interagency Coordination Center
Incident Management Situation Report
Tuesday, June 19, 2018 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial Attack Activity: Light (107) new fires
 New large incidents: 0
 Large fires contained: 2
 Uncontained large fires:** 11
 Area Command teams committed: 0
 NIMOs committed: 1
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

Nationally, there are 28 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Rocky Mountain Area (PL 2)

New fires: 5
 New large incidents: 0
 NIMOs committed: 1
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 1

416, San Juan NF. IMT 1 (Pechota). IMT is also managing the Burro fire. NIMO (Reinarz) mobilizing. Thirteen miles north of Durango, CO. Timber and brush. Minimal fire behavior. Numerous residences threatened. Evacuations, road, area and trail closures in effect.

Badger Creek, Medicine Bow-Routt NF. IMT 2 (Greer). Two miles northwest of Mountain Home, WY. Timber. Minimal fire behavior. Numerous structures and sage-grouse habitat threatened. Road, area and trail closures in effect.

Burro, San Juan NF. Fourteen miles south of Rico, CO. Timber. Minimal fire behavior. Road, area and trail closures in effect.

Upper Mailbox, Uncompahgre Field Office, BLM. Three miles northeast of Redvale, CO. Chaparral. Minimal fire behavior.

Southwest Area (PL 3)

New fires: 11
 New large incidents: 0
 Uncontained large fires: 4

Buzzard, Gila NF. Ten miles east of Reserve, NM. Timber. Minimal fire behavior. Structures threatened. Road, area and trail closures in effect.

San Antonio, Valles Caldera National Preserve, NPS. Eighteen miles northwest of Los Alamos, NM. Timber and short grass. Moderate fire behavior with creeping and smoldering. Structures threatened. Road, area and trail closures in effect.

Cottonwood, Cimarron District, New Mexico State Forestry. Twelve miles north of Cimarron, NM. Timber, brush and short grass. Moderate fire behavior with backing, creeping and smoldering. Precipitation occurred over the fire area yesterday.

Soldier Canyon, Mescalero Agency, BIA. One mile northeast of Mescalero, NM. Timber, brush and medium logging slash. Minimal fire behavior. Area closures in effect.

Predictive Services Discussion: The very large but weakening upper level low pressure area over the West will continue to create widespread showers and storms across the southeastern portion of the Pacific Northwest, Northern Rockies, Northern Great Basin, and Northern California while a slot of drier air allows for dry conditions across Southern California, Arizona, southern Nevada, and southern Utah. New Mexico will continue to see scattered wet convection as will Colorado. Across the Great Plains, the high pressure ridge will remain weak but strong enough to keep the central and northern Great Plains mostly hot and dry. Subtropical moisture over the southern Great Plains will lead to scattered convection. The East could remain stormy as well due to the presence of a stationary front. In Alaska, a strengthening ridge of high pressure will lead to continued warming and drying across the Interior. Expect above normal temperatures and low afternoon humidities.

Fire Not Scouted And Sized Up

Operational Engagement Category

Watchout Situation #1 comes up during initial attack and **every time** resources arrive at a fire.

- Before taking action on the fire, the following considerations must be addressed:
 - Can you personally observe the fire or must you use scouts? Describe ways you can scout and size up a fire.
 - Do you know the location of the fire perimeter? Discuss situations in which the fire perimeter may not be obvious. (Spotty fires, etc.)
 - Do you know the direction of fire spread? When isn't the direction of fire spread obvious? (Wind shifts, spotty fires, etc.)
 - Does the direction of fire spread increase risk? Talk about situations where you may have to approach the head of the fire. (Hiking down from a helispot, approaching from an existing road, switching winds, etc.)
 - Do you know the fuels and their condition? What kind of information will you assume from what you already know about fuel types? (Spot fires in fir, extreme fire potential in flashy fuels, etc.)
 - What information can aerial resources provide about the fire?
 - Do topographic hazards exist? What can you assume from the kind of terrain the fire covers? (Slope, chimneys, aspect, etc.)
 - Does enough information exist to establish a plan of attack? When do you have enough information to begin fighting fire? What do you need to know?
 - Do other dangers exist? Have you talked about factors specific to the area you are working in? (Hunters in the woods, drought, snag patches, etc.)
- To reduce the risks:
 - Post lookouts until the fire is sized up and escape routes and safety zones are established.
 - Retreat if the situation is too complex. Review fires where you had to wait until your assigned area of the fire was scouted and sized up before you were allowed onto the fireline.

Have an idea? Have feedback? Share it.
