

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, June 22, 2018 – 0530 MT  
National Preparedness Level 2**

**National Fire Activity**

Initial Attack Activity: Light (131) new fires  
 New large incidents: 7  
 Large fires contained: 4  
 Uncontained large fires:\*\* 11  
 NIMOs committed: 1  
 Type 1 IMTs committed: 1  
 Type 2 IMTs committed: 2

Nationally, there are 32 large fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

**Alaska Area (PL 1)**

New fires: 5  
 New large incidents: 3  
 Uncontained large fires: 0

**Dulby Hot Springs**, Galena Zone, Alaska Fire Service. Previously reported incident. Sixty-one miles northeast of Galena, AK. Timber. Active fire behavior with backing and torching. Last narrative report unless significant activity occurs.

**Webber Creek**, Upper Yukon Zone, Alaska Fire Service. Thirty-two miles east of Circle Hot Springs, AK. Timber and short grass. Moderate fire behavior with isolated torching. Last narrative report unless significant activity occurs.

**Door Mountains**, Southwest Area, Alaska DOF. Previously reported incident. Twenty-seven miles west of Lime Village, AK. Timber and Short Grass. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Little Melozitna River**, Tanana Zone, Alaska Fire Service. Previously reported incident. Fifty miles west-northwest of Tanana, AK. Timber. Minimal fire behavior. Last narrative report unless significant activity occurs.

\* **Swift Fork**, Tanana Zone, Alaska Fire Service. Twenty-five miles southeast of Telida, AK. Timber and short grass. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Unalakleet River**, Galena Zone, Alaska Fire Service. Previously reported incident. Thirty-one miles west of Kaltag, AK. Timber. Minimal fire behavior. Last narrative report unless significant activity occurs.

\* **Purcell**, Galena Zone, Alaska Fire Service. Fifty-eight miles northwest of Huslia, AK. Brush. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Lynx Creek**, Tanana Zone, Alaska Fire Service. Previously reported incident. Started on state land 50 miles northeast of Minchumina, AK. Timber and hardwood litter. Minimal fire behavior. Last narrative report unless significant activity occurs.

\* **Snohomish**, Tanana Zone, Alaska Fire Service. Ten miles west of Lake Minchumina, AK. Timber. Minimal fire behavior. Last narrative report unless significant activity occurs.

**Predictive Services Discussion:** Cooler conditions are expected across the northwestern portion of the country as a cold front continues to push east into the northern Great Plains. Scattered showers and storms will continue to be possible across the Northern Rockies. Critical fire weather conditions may be present across the Great Basin as breezy winds interact with warm and dry air. Temperatures across the Southwest will be slightly less hot but will remain elevated across Southern California as the ridge of high pressure retreats to the west slightly. Looking east, widespread showers and storms will be possible across the upper Mississippi River Valley and across the southern portion of the Great Lakes as a low pressure area and cold front begin to move north. In Alaska, high pressure across the Interior and low pressure along the West Coast will linger; however, a slight decrease in instability and moisture availability will restrict convective development to areas along the Brooks Range.

## Fire Shelter Deployment

*Operational Engagement*

**Firefighters must never rely on fire shelters, but instead should depend on well-defined and pre-located escape routes and safety zones. However, if the need for shelter deployment should ever arise, it is imperative that the firefighter knows how to deploy and use the shelter.**

- Don't think of your fire shelter as a tactical tool.
- Recognize when deployment is your only option. When considering escape, remember that you can hold your breath for only about 15 seconds while running through flames or superheated air.
- If time runs out while attempting to escape, get on the ground before the flame front arrives and finish deploying on the ground. Death is almost certain if the fire catches a person off the ground. (The optimal survival zone with or without a shelter is within a foot of the ground.) Once entrapped, the highest priority is to protect the lungs and airways.
- When deploying, remove packs and place them away from the deployment area.
- Even though deploying your shelter is a last resort, time is critical when entrapped. Play it safe; give yourself ample time to deploy. Failure to adequately anticipate the severity and timing of the burnover and failure to utilize the best location and proper deployment techniques contributed to the fatalities and injuries on the Thirty Mile incident. Don't let the cost of opening a shelter become a factor in your decision.
- Before passing through superheated gases, try to close the front of your shroud. You can take your shelter out of the plastic bag and use it for a heat shield to pass quickly through a hot area. If you use the shelter in this way, don't drop it or allow it to snag on brush. Remember that your lungs are still vulnerable.
- If flames contact the shelter, the glass/foil fabric heats up more rapidly. If flame contact is prolonged, spots of aluminum foil can melt or tear away, reducing protection. Even if this happens, it is still safer inside the shelter. Your flame-resistant clothing becomes your backup protection. It's even more critical to keep your nose pressed to the ground and stay in your shelter.
- Remember, direct contact with flames or hot gases is the biggest threat to your shelter. It is vital to deploy in a spot that offers the least chance of such contact. The heavier the fuels, the bigger your fuel break needs to be.
- Remember, once you commit yourself to the shelter, stay there. No matter how bad it gets inside, it is usually much worse outside. If you panic and leave the shelter, one breath of hot, toxic gases could damage your lungs. Suffocation may follow. Most firefighters were killed as a result of heat-damaged airways and lungs, not by external burns. Protect your airways and lungs at all costs by keeping your face close to the ground and staying in your shelter.

***If your crew becomes entrapped, identify everything you and your crew/team are going to do to survive (start your discussion using pages 30-31 in your IRPG).***

***Activity: Consider having a mock fire shelter deployment exercise in realistic terrain and fuels using practice shelters (no live fire). Assess the exercise using an AAR.***
