# National Interagency Coordination Center <br> Incident Management Situation Report <br> Tuesday, June 26, 2018 - 0530 MT <br> National Preparedness Level 2 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Nationally, there are 35 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

Predictive Services Discussion: A weak cold front will move across the Pacific Northwest and the Northern Rockies creating breezy conditions along with isolated storms. However, fuel conditions are bit yet broadly critical enough to make the passage of this front a significant concern except possible across the northern Great Basin where fine fuels may be more receptive to fire starts. Further south, hot and dry conditions will remain entrenched across the Southwest. Isolated storms will be possible on the Mogollon Rim in Arizona and New Mexico in the afternoon. Another passing cold front will bring slight cooling to the Great Plains along with scattered storms near the Mississippi River in the afternoon. Along the East Coast, expect hot and humid conditions. Scattered storms will be possible across Florida as a weakening frontal boundary hangs up along the Atlantic Coast. In Alaska, scattered storms will be possible across the Interior as moisture from a system along the West Coast moves inland and through the high pressure ridge.

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking?

\section*{The Dude Fire}

\section*{Incident Summary:}

June of 1990 will long be remembered as one of the hottest months in Arizona history. On June \(26^{\text {th }}\) the temperature rose to record temperatures of \(122^{\circ} \mathrm{F}\) in Phoenix and to \(106^{\circ} \mathrm{F}\) in Payson. In addition to the extreme temperatures, Arizona had been in a severe 3 year drought, the combination producing a critically high fire danger throughout the state, especially the Mogollon Rim country and the Tonto National Forest north of Payson. Fuels in the area are primarily ponderosa pine with an understory of mixed oak, manzanita, needle and leaf litter, and scattered large (greater than 6 inch diameter) dead logs. Much of the understory brush is heavily draped with very dry pine needles. Live fuel moisture of the manzanita and oak is very low ( \(76 \%\) ), fine dead fuel moisture is \(3 \%\) and \(8 \%\) for larger dead fuels. At 1230 June \(25^{\text {th }}\), a dry lightning storm starts a fire under the Mogollon Rim on the Payson Ranger District, Tonto NF Arizona. The fire is on a steep SW facing slope at 6400 ft . elevation. At 1330 , the fire is estimated from the air at 5 acres, 50 acres one hour later, and over 100 acres by 1615 with a spot fire one mile east of the main fire. By 1800 a Type II IMT has arrived and a Type I IMT and 18 crews had been ordered. The fire is being pushed by brisk down canyon winds and is 1900 acres by 0500 on June \(26^{\text {th }}\) and is threatening the forest subdivision of Bonita Creek Estates. A convection column, aided by combustion, begins forming over the fire by 1000 . The column continues to grow and becomes a fully mature thunderstorm by 1400 . Radio and frequency issues are causing a breakdown in communication between the crews and the overhead team. The teams are transitioning mid-shift resulting in confusion between the crews and supervision. The thunderstorm begins to decay creating strong downbursts channeled by the topography, causing dramatic down and across slope fire spread on nearly all sides of the fire. Members of the Perryville Fire Crew will not be able to escape from the fast and erratic fire spread. Five are injured. Six will die on the fireline.

\section*{Discussion Points:}

The fire behavior indicator system "Look Up, Look Down, Look Around" was developed in response to this tragic fire.
- Using page 2 and 3 in your IRPG, what indicators are most significant in your area to let you know the fire behavior may become problematic?
The Haines Index, a measure of the atmospheres effect on a fire's growth potential, was adopted for inclusion on Fire Weather forecasts issued by the National Weather Service.
- Review and discuss the Haines Index information on page 75 in your IRPG. In his paper "LCES and Other Thoughts", Paul Gleason writes about kneeling next to one of the Perryville firefighters and of his promise to help end needless fatalities and near misses.
- Review page 6 in your IRPG and discuss how you and your crew establish and maintain LCES.
- Discuss the difference between establishing LCES and maintaining LCES.
- What are common barriers to maintaining LCES?
We honor these firefighters today by learning about the lessons they learned the hard way and by using this tragic event as a tool to keep ourselves and our crews safe on the fireline. Use the following resources:
- Dude Fire Staff Ride
- Fire Investigation Report
- Dude Fire - Fire Weather Behavior
- "LCES and Other Thoughts" by Paul Gleason
