# National Interagency Coordination Center <br> Incident Management Situation Report <br> Thursday, June 28, 2018 - 0530 MT <br> National Preparedness Level 2 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (119) new fires
7
3
17
1
2
3

Nationally, there are 36 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

Predictive Services Discussion: The westerly flow will be replaced by a strengthening trough that will move on shore from the Pacific Ocean. Breezy winds will develop across the Great Basin and southeastern California which will create critical fire weather conditions when they interact with very low humidities in the afternoon. Another area of concern will be across northwestern Wyoming, southern Idaho, and northern Nevada where dry storms will develop along a developing cold front. Across the Great Plains, a ridge of high pressure will begin to develop and lead to a warming trend. This ridge will be the dominant feature over the country for the next week or two. Meanwhile to the south, monsoonal moisture will begin collecting over northern Mexico. In Alaska, low pressure areas across the Interior and along the northern Gulf Coast will allow for the development of widely scattered storms near Galena along with cooler temperatures across the eastern Interior.

## Helicopter Landing Zone Selection

Aviation Category

Consider the following points when selecting a landing zone for a helicopter:

- Locate a flat area that is of sufficient size for the helicopter you are expecting to land.
- Type I -- Clear and level touchdown pad measuring 30 feet by 30 feet; safety circle measuring 110 feet in diameter.
- Type II -- Clear and level touchdown pad measuring 20 feet by 20 feet; safety circle measuring 90 feet in diameter.
- Type III -- Clear and level touchdown pad measuring 15 feet by 15 feet; safety circle measuring 75 feet in diameter.
- Choose an area clear of people, vehicles, and obstructions such as trees, poles, and especially overhead wires.
- The area must be free of stumps, brush, posts, large rocks or anything over 18 inches high.
- Consider the wind direction. Helicopters land and take off into the wind.
- Choose an approach free of obstructions. Any obstruction should be relayed to the helicopter crew during initial radio contact.
- Remove or secure any loose items in and around the landing area such as trash, blankets, hats, or equipment.
- Wet down the landing area if dusty conditions are present.
