

**National Interagency Coordination Center
Incident Management Situation Report
Friday, June 29, 2018 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial Attack Activity: Light (135) new fires
 New large incidents: 4
 Large fires contained: 11
 Uncontained large fires:** 20
 NIMOs committed: 1
 Type 1 IMTs committed: 2
 Type 2 IMTs committed: 2

Nationally, there are 26 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Rocky Mountain Area (PL 3)

New fires: 10
 New large incidents: 1
 Uncontained large fires: 4
 NIMOs committed: 1
 Type 2 Teams committed: 1

Spring Creek, Costilla County. IMT 2 (Greer). Nine miles northeast of Fort Garland, CO. Timber, brush and tall grass. Extreme fire behavior with torching crowning and long-range spotting. Community of LaVeta threatened. Evacuations in effect.

416, San Juan NF. NIMO (Reinarz). Thirteen miles north of Durango, CO. Timber and brush. Moderate fire behavior with backing and torching. Numerous residences threatened. Road, area and trail closures in effect.

Badger Creek, Medicine Bow-Routt NF. Two miles northwest of Mountain Home, WY. Timber. Active fire behavior with running, spotting and torching. Road, area and trail closures in effect.

Burro, San Juan NF. Fourteen miles south of Rico, CO. Timber. Active fire behavior with torching, creeping and short-range spotting. Road, area and trail closures in effect.

* **Sugarloaf**, Arapaho-Roosevelt NF. Thirteen miles southwest of Fraser, CO. Timber and light logging slash. Active fire behavior with uphill runs and single-tree torching. Last narrative report unless significant activity occurs.

Predictive Services Discussion: As the upper level trough moves across the Northern Rockies and the northern Great Basin, scattered dry and wet storms will be possible across Wyoming and northern Utah. Breezy southwesterly winds across southern Utah, southern Nevada, and northern Arizona will lead to critical conditions there. Meanwhile, the first surge of the Southwest Monsoon will make its presence felt across southeastern Arizona, New Mexico, and southeastern Colorado with higher humidities and scattered convection. High pressure over the Great Plains will move east to the Mississippi River by afternoon bringing hot and humid conditions to the eastern half of the country. In Alaska, moisture trapped within a high pressure ridge over the Interior will lead to the development of scattered storms in the afternoon. Some snow will be possible in the higher elevations on the Alaskan Peninsula as a low pressure area moves east from the Aleutian Islands.

Hazard Tree Felling – Hang-Ups

Felling Safety Category

Felling a hung-up hazard tree is a particularly hazardous and complex task. Safely felling a hang-up requires extreme caution and expertise.

The following are some topics sawyers should review during tailgate safety discussions to address felling hang-up hazard trees:

Size up and Evaluation:

- Cut/No Cut (walk-a-way). Is tree secure and does it need to come down?
- What type of hang up? In a fork, pinched between two trees or resting on limbs?
- Vertical hang ups have increased complexities.
- Condition of all relevant trees; live, dead, rot, etc. Does the hang up tree have any weak areas that could fail?
- Obscured view of top?
- If sawyer is unsure of outcome do not attempt to cut leaner.

Operational Considerations:

- Escape routes for unforeseen circumstances?
- Consider falling trees as a group.
- Consider face cuts versus slash cuts for directional control.
- Rope Technique allows increased distance from danger zones

Alternative Mitigations:

- Blasting
- Heavy equipment/cable
- No Work Zones

Discuss any personal lessons learned with hang-up trees that you may have experienced.
