# National Interagency Coordination Center <br> Incident Management Situation Report <br> Sunday, July 1, 2018 - 0530 MT <br> National Preparedness Level 3 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (107) new fires
5
1
29
1
2
3

Nationally, there are 27 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

Predictive Services Discussion: The upper level trough will stall over Saskatchewan and eastern Montana keeping the Northern Rockies and northern Great Plains cool and moist. Hot and dry conditions will continue across California and the western Great Basin as high pressure off shore extends east. Monsoonal convection across the Southwest will be limited to areas along the Mexican Border and West Texas. Meanwhile, the ridge of high pressure over the southern Great Plains and over the Lower Mississippi River Valley will begin a slow intensification process. In Alaska, moisture trapped within a high pressure ridge over the Interior will lead to the development of scattered storms in the afternoon between the Brooks Range and the Alaskan Range. Wet conditions are expected along the northern Gulf Coast as low pressure moves east from the Alaskan Peninsula to Kodiak Island.

# Day 2 <br> Medical Incident Response 

## Week of Remembrance June 30-July 6

This Week of Remembrance is dedicated to all those who have fallen in the line of duty and is intended to serve as an opportunity to renew our commitment to the health, wellness and safety of wildland firefighters.
On July 25, 2008 a falling module from an engine company was assigned to mitigate hazard trees along a fireline in Northern California to enable crews to safely work in the area. At approximately 1350, a firefighter called ICP for medical assistance for a severely injured crew member-18-year-old Andy Palmer. Emergency medical personnel responded and treated the injured firefighter for severe bleeding. Due to heavy smoke conditions requiring Instrument Flight Rules (IFR) capability, primary helicopter resources were unable to respond to the injured firefighter's location. Firefighters carried the injured party by litter to a location where he was eventually hoisted into a U.S. Coast Guard helicopter (USCG) at approximately 1630. The USCG Helicopter carrying the injured firefighter arrived at Redding Municipal Airport, where Andy was pronounced dead at 1710. This was Andy Palmer's first fire assignment. This line of duty death would later be referred to as the Dutch Creek Incident

This incident and the loss of Andy shocked and saddened the wildland fire service. Many wondered how it could take more than three hours to get a severely injured firefighter off the line and to a hospital. After all, this fire was being managed by a Type 1 Incident Management Team. There were line EMTs assigned to the fire. There was a medical plan in place. Yet with everything in place, we still lost a young firefighter.

Everyone on scene and in a supporting role that day did everything they could do to help Andy Palmer. The questions and discussions that emerged in the aftermath were about reducing the chance of this happening again. What do we need to change in our systems? Where are the holes and gaps that allowed this to happen? What new tools do we need to provide to our firefighters, fire managers, dispatchers and IMTs when it comes to planning for a medical response and evacuation to a hospital?

In July of 2009, the Dutch Creek Accident Review Board (ARB) recommended eight corrective measures to "...help prevent similar accidents from occurring in the future". In May of 2010, NWCG released a memo titled "Dutch Creek Serious Accident Investigation Report Response: Three (3) New Incident Management Team (IMT) Daily Operation Protocols/Procedures". This memo later became known as the "Dutch Creek Protocol".

One of the recommendations in the Dutch Creek Protocol memo was to add some standard language to the ICS-206 Medical Plan, Block 8 titled "Emergency Medical Procedures". These procedures were printed on adhesive pink stickers by the Wildland Fire Lessons Learned Center (LLC), and could then be added to the Incident Response Pocket Guide (IRPG) medical section. More than 100,000 stickers were sent out to the field. Over time, the pink sticker protocol was tested, refined, and is now referred to as the Medical Incident Report (MIR), which was first included in the IRPG in 2014. It was recently updated and improved for the 2018 IRPG.

Action: Watch this video and then do the following:

- On page 2 in your IRPG, review and discuss the value of "Planning for Medical Emergencies".
- On page 118 \& 119 in your IRPG, review and discuss how to use the "Medical Incident Report".
