# National Interagency Coordination Center <br> Incident Management Situation Report <br> Wednesday, July 4, 2018 - 0530 MT <br> National Preparedness Level 3 

## National Fire Activity

Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command teams committed: 0
NIMOs committed:
1
Type 1 IMTs committed: 4
Type 2 IMTs committed: 5
Nationally, there are 28 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

Two MAFFS C-130 airtankers and support personnel from the 302nd Airlift Wing (Colorado Springs, Air Force Reserve) have been deployed to Colorado Springs, CO in support of wildland fire operations.

Predictive Services Discussion: The intense high pressure ridge over the East and the southern Great Plains will continue to slowly strengthen allowing for temperatures east of the Continental Divide to continue to soar. Monsoonal moisture on the western fringes of the ridge will surge northward across New Mexico into Colorado creating scattered storms in the afternoon. In general, temperatures across the West will enjoy one last day of near-average conditions before the ridge begins to infiltrate the western states. Breezy winds across the southern Great Basin along with continued single digit relative humidities will continue to promote critical fire weather conditions across southern Nevada and Utah. The Pacific Northwest will continue to experience below average temperatures as a trough remains off the coast shielding them from what is to come to areas east and south of them.

In Alaska, below average temperatures are expected as low pressure moves over the Kenai Peninsula and as high pressure becomes centered over Nome. This will create an overall northwesterly flow from the Arctic Ocean. Convection across the state will be limited mainly to areas east of Glennallen and Tok.

As we approach the 10 year anniversary of the Dutch Creek Incident and the loss of firefighter Andy Palmer, we are called to remember the lessons learned from that incident and how extraction by helicopter can play a role in emerging medical incidents.

For the 2018 fire season, there are currently nine National Park Service and five Forest Service Short-Haul Programs in active status. The common mission of each program is the safe and efficient extraction of an injured patient. Increased interagency support and cross training has proven to enhance the awareness of best practices and most importantly provide for the safest environment not just for the patient, but for the rescue crews as well.

Below we address considerations and resources on how methods of helicopter extraction may affect your decision making process when confronted with an emergency incident, while in the field.

## Considerations for Fireline personnel:

- Have you reviewed the Incident Medical Plan (ICS 206) with your crew this shift? (NWCG-ICS Forms)
- Is everyone on your crew familiar and practiced with the 2018 Incident Response Pocket Guide and its updates?
o Medical Incident Report and how to use it? (pg. 118-119)
o Helicopter Extraction Operations (pg. 116-117)
- Do all members of your crew know the location and distance to medical equipment and fireline medical personnel? Consider risk management including the distance, time and number of personnel needed to perform a ground based rescue VS. a Short-Haul/Hoist mission.
- Never assume that a helicopter will be available. Always have a solid plan for a ground-based extrication.
- Keep all medical resources headed to the incident/patient until the patient is in higher level of care/on the way to the hospital. From the Dutch Creek Investigation Report: "USCG told TSO, "We were stood down by SOF because they would be hiking FC1 to a landing zone and a Forest Service helicopter would land and pick FC1 up." TSO reported to USCG they had just spoken with a medic on scene and FC1 was now "in and out of consciousness" and "has got blood loss." USCG stated they would call SOF back. At 1446, USCG called COM trying to confirm the helicopter cancellation and subsequently SOF retracted cancellation of USCG helicopter."
- Does your crew know where to find out where the closest extraction resources are to them? NWCG: https://www.nwcg.gov/committee/hshu-ehe
- Does the local unit have an agreement in place with a local air ambulance service? Are the frequencies communicated to fire personnel? What are the aircraft's capabilities/limitations?
- Remember to ask questions if you are unsure of Short-Haul/Hoist aircraft capabilities and always strive to lookout for yourself and those around you.
