*1 Hectare = 2.47 Acres

Predictive Services Discussion: The ridge of high pressure over the West will begin to flatten and weaken slightly. This will allow for temperatures to not be quite as hot as the previous two days...but still hot. Very low relative humidities will continue across the central and northern Great Basin while the southern Great Basin begins to show some improvement with a northwestward surge of monsoonal moisture up from Arizona and New Mexico. Scattered west storms will be possible as far north as Wyoming and eastern Montana by afternoon. Temperatures will be near normal across the Pacific Northwest, and the western portion of the Northern Rockies Regions. Scattered storms will remain possible across the Deep South as a stationary front remains stalled over the area. In Alaska, high pressure will move into the northwestern portion of the state and will bring more stable conditions which will promote normal temperatures across most of the state.

## Operational Briefings

Fire Communications Category

Operational briefings are critical to safe fire operations. To ensure a consistent and effective briefing, a standardized briefing checklist should always be used. The following checklist is printed on the cover of the NWCG Incident Response Pocket Guide:

- Situation:
- Fire name, location, map orientation, other incidents in the area
- Terrain influences
- Fuel type and conditions
- Fire weather (previous, current, and expected)
- Fire behavior (previous, current, and expected)
- Mission/Execution:
- Command (Incident Commander/immediate supervisor)
- Leader's intent
- Specific tactical assignments
- Contingency plans
- Communications:
- Communication Plan (tactical, command, air/ground frequencies, cell phone numbers, etc.)
- Medevac Plan
- Service/Support:
- Other resources that may be working adjacent to you and those available to order
- Aviation operations
- Logistics (e.g., transportation, supplies, equipment)

Risk Management:

- Identify known hazards and risks
- Identify control measures to eliminate hazards and reduce risk
- Identify trigger points for disengagement or reevaluation of operational plan
