# National Interagency Coordination Center <br> Incident Management Situation Report <br> Monday, July 16, 2018 - 0530 MT <br> National Preparedness Level 3 

National Fire Activity
Initial Attack Activity:
New large incidents:
Large fires contained:
Moderate (221) new fires

Uncontained large fires:**

$$
6
$$

Uncontained large fires. 34
Area Command teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 2
Type 2 IMTs committed:
5
Nationally, there are 20 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.

*1 Hectare = 2.47 Acres

Predictive Services Discussion: The upper ridge will gradually drift east over the Four Corners region. A weakening upper wave will cross the northern Great Basin, pushing thunderstorm activity into Idaho, northern Nevada, northern Utah, southwestern Montana, and western Wyoming. Most of this activity will produce a few tenths of an inch of rain but some storms will produce lightning with little to no rainfall. Scattered thunderstorms will continue across the Southwest and the southern Rockies where heavy rain is possible. A front moving into the eastern half of the country will produce scattered showers and thunderstorms across a broad area east of the Mississippi River. High pressure will drop into the Upper Midwest and Mid-Mississippi Valley bringing drier and slightly cooler conditions. Hot weather will remain over much of the West and South. In Alaska, scattered showers and thunderstorms will continue and temperatures will remain seasonal to cool.

# Initial Attack Sizeup/Safety 

Operational Engagement Category

Having a good sizeup is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting. Use the following reporting factors for size-up and reference local fire size-up cards. Discuss others that may be used.

- Fire name and location
- Terrain (slope, aspect, elevation) and position of fire on the slope
- Size of fire
- Fuel type, anticipated control problems, and spread potential
- Values threatened
- Weather conditions (wind speed and direction)
- Fire behavior
- Resources on the fire and those needed
- Estimated containment and control times
- Cause (known, suspected, under investigation)

After your initial size-up of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.

- Have you sized up the fire and relayed the information to dispatch?
- Is the observed fire weather consistent with the forecast?
- Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
- Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
- Are lookouts in place or can you see all of the fire area?
- Can you communicate with everyone on the fire and with dispatch?
- Are escape routes and safety zones established? If you are using the black, is it completely burned and without a reburn potential?
- Are safety and the standard fire orders being followed and/or mitigated?
- Do you have a complete list of what resources have been ordered for the fire?
- Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
