

**National Interagency Coordination Center
Incident Management Situation Report
Monday, July 23, 2018 – 0530 MT
National Preparedness Level 4**

National Fire Activity

Initial Attack Activity:	Light (137) new fires
New large incidents:	9
Large fires contained:	2
Uncontained large fires:**	56
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	4
Type 2 IMTs committed:	9

Nationally, there are 24 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

[Link](#) to Geographic Area daily reports.

The U.S. has mobilized 12 federal wildland firefighters to support fire suppression efforts in Ontario, Canada.

Northwest Area (PL 4)

New fires:	18
New large incidents:	1
Uncontained large fires:	24
Type 1 IMTs committed:	3
Type 2 IMTs committed:	5

Garner Complex (6 fires), Grant Pass Unit, ODF. ODF IMT 1 (Cline). Four miles east of Cave Junction, OR. Timber and medium logging slash. Active fire behavior with uphill runs, group torching and short-range spotting. Numerous structures threatened. Evacuations, road and area closures in effect.

Substation, Wasco County. Transfer of command from IMT 1 (Schulte) back to the local unit will occur today. Started on private land five miles south of The Dalles, OR. Brush and tall grass. Minimal fire behavior. Numerous structures threatened. Evacuations and area closures in effect. Reduction in acreage due to more accurate mapping.

Natchez, Rogue River-Siskiyou NF. Transfer of command from IMT 2 (Lawson) to IMT 1 (Livingston) will occur today. IMT is also managing the Klondike incident. Fifteen miles southeast of Cave Junction, OR. Timber, chaparral and hardwood litter. Active fire behavior with backing, flanking and group torching. Structures threatened. Road and area closures in effect.

Klondike, Rogue River-Siskiyou NF. Nine miles northwest of Selma, OR. Hardwood litter and brush. Active fire behavior with backing, short-range spotting and uphill runs. Residences threatened. Evacuations, road and area closures in effect.

South Umpqua Complex (4 fires), Umpqua NF. IMT 2 (Sheldon). Thirty miles southeast of Myrtle Creek, OR. Timber. Active fire behavior with group torching, short crown runs and uphill runs. Residences threatened. Road and trail closures in effect.

Hendrix, Rogue River-Siskiyou NF. IMT 2 (Harrod). Nine miles southwest of Ashland, OR. Timber and medium logging slash. Active fire behavior with single-tree torching. Residences threatened.

Timber Crater 6, Crater Lake National Park, NPS. IMT 2 (Goff). Twenty miles southwest Chemult, OR. Timber. Active fire behavior with uphill runs, group torching and short-range spotting. Area closures in effect.

Sugar Pine, Rogue River-Siskiyou NF. IMT 2 (Gales). IMT is also managing the Goodview, Round Top and Union incidents. Twelve miles northwest of Prospect, OR. Timber. Active fire behavior with short-range spotting, uphill runs and single-tree torching.

* **Goodview**, Rogue River-Siskiyou NF. Ten miles northwest of Prospect OR. Timber. Moderate fire behavior with flanking and backing.

Round Top, Rogue River-Siskiyou NF. Eight miles northwest of Prospect, OR. Timber. Moderate fire behavior with creeping and backing.

Union, Rogue River-Siskiyou NF. Ten miles northeast of Prospect OR. Timber. Minimal fire behavior.

Locust Grove, Washington State Fire. Five miles southwest of Kennewick, WA. Short grass. Minimal fire behavior. Residences threatened.

Boylston, Southeast Region, Washington DNR. Thirteen miles east of Ellensburg, WA. Brush and tall grass. No new information.

Cemetery, Prineville District, BLM. Thirty-two miles southeast of Prineville, OR. Timber, brush and tall grass. No new information.

Buckshot, Spokane District, BLM. Started on private land two miles south of Mattawa, WA. Brush and tall grass. No new information.

Wagner Complex (1 fire), Medford Unit, ODF. Three miles south of Talent, OR. Timber and brush. No new information.

Predictive Services Discussion: The Four Corners high pressure area will strengthen over the Southwest and allows for a strong surge of monsoonal moisture to develop scattered wet storms across the Four Corner's Region, Nevada, and North Texas. Further north, a critical fire weather scenario will begin to set up as shards of monsoonal moisture begin to filter further into the Pacific Northwest and the Northern Rockies. These storms, while still isolated, will be dry and should trigger new starts as the stage begins to set for the next few days after today, which should be pretty convective. Areas along the Pacific Coast will remain hot and dry. There is some off shore flow potential near Santa Barbara. In the East, a weakening area of low pressure will move west along the Gulf Coast and will produce scattered thunderstorms with heavy rain. A stalled frontal boundary along the Atlantic Coast will lead to widespread showers from Maine south to Georgia.

This Day in History is a brief summary of a powerful learning opportunity and is not intended to second guess or be judgmental of decisions and actions. Put yourself in the following situation as if you do not know what the outcome will be. What are the conditions? What are you thinking? What are YOU doing?

Elk Fire – Helicopter Accident

Incident Summary: July 23 2007 California – A handcrew is assigned to mop up on the Elk Complex. The crew's superintendent requests blivets through the division supervisor (DIVS) to support the operation. A medium helicopter will longline the blivets.

Two days before the accident - The DIVS anchors a fluorescent panel to the ground (used for indicating landing and drop zones) for the handcrew to use. The terrain in the area contains steep slopes and trees from 75 to 200 feet tall.

Day before the accident - The crew prepares for blivet delivery. The location of the panel remains as placed by the DIVS. The helicopter makes the blivet drop close to the panel. The crew member who is marshaling warns the pilot about the proximity of one tree located to the right and upslope of the panel. Concerned with their own safety, two ground crew members distance themselves from the blivet drop site. The division safety officer visits the site after the blivet delivery. There was no discussion regarding the drop zone location or recognized hazards. At the After Action Review (AAR) in camp that evening, there is no mention of it. Additional blivets and back haul are requested by the crew superintendent through the DIVS for the following day.

Day of the accident - The pilot is informed that he would be delivering more blivets to the same drop zone. Two crew members, not the same from the previous day, staff the drop site. The panel remains in the same location as the previous day. Though the helicopter is equipped with a 150ft longline, the marshaller communicates with the DIVS that a longer longline is recommended. By the time the recommendation is transmitted to the helibase, the helicopter is en route with blivets. Due to radio traffic, the marshaller and pilot did not communicate until the helicopter is on final approach to the drop site. Crew members witness the helicopter drift to the right as the blivets were set down, and watched the main rotor striking the tall tree.

The longline and the blivets remain attached as the helicopter turns left and flies downhill, impacting trees as it falls to the ground. The helicopter is destroyed. Though crew members attempt to provide assistance, the pilot is killed.

Discussion Points:

Lookouts – In medium helicopters many pilots fly external load missions from the left seat, leaning left out the bubble window. This decreases the pilots ability to see to the right of the aircraft. As ground personnel working with helicopters, you may have a view of hazards that the pilot does not.

- *If you are giving a new pilot a briefing about hazards in your area, what will your emphasis points be?*

Communications – During a post-accident interview two crew members stated that they were so concerned about the potential for an accident that they briefed each other three times on what action would be taken in the event of an accident.

- *Discuss some of the reasons that people do not speak up when they see something wrong.*
- *During your work today, you may only get one chance to communicate a hazard before an accident happens. Identify how you and your crew will combat the reluctance to verbalize hazards.*

There was a wider open spot down the line a short ways that would have made a better drop site, but the DIVS had placed the panel in a convenient spot for the crews and did not communicate that he did not intend it to be the drop site for the blivets.

- *Discuss how your crew leader wants crew members to speak up with questions, ideas and solutions.*

Escape Routes – We strive to work as safe as possible, but when things go wrong we need a way out. Just as with fire and felling, pilots in aircraft and the ground crews working with them need to establish escape routes for the aircraft and the ground crew.

Safety Circle - The helicopter's main rotor impacted the top 15 feet of a 165ft tree. This means the helicopter's safety circle was not big enough to remain clear of hazards. (A safety circle is generally recognized as 1 ½ times the rotor diameter and are used for keeping a safe distance from hazards both on the ground and in flight).

- *Using your IRPG, identify the minimum size of a safety circle for a medium helicopter.*
- *What are some ways to estimate the height of a tree?*
- *What are some options you have as a ground crew to improve a drop site with a hazardous tree?*
- *What are some options you have as a ground crew if you have an unsafe condition at the drop site and the helicopter is enroute?*
- *What immediate actions do you take as a ground crew at a drop site if the helicopter is getting too close to a hazard?*
- *Could asking the pilot to do a recon of the drop site have potentially changed the outcome of this accident?*
