Predictive Services Discussion: A ridge breakdown event will continue today as the departing thermal trough moves further east into the Northern Rockies and eastern Idaho and as a cold front moves across the Pacific Northwest. Both convection and wind are possible with the passage of this front, especially across the Northern Rockies where some of the convection will be dry. Existing fires may be pushed by the expected windy conditions, especially in the open spaces where fine fuels dominate. Hot and dry conditions are expected from the central Great Basin south to the Mexican Border and isolated monsoonal convection is expected in the Four Corners. A low pressure area located over the southeastern Great Plains will allow for scattered storms to continue to develop across East Texas and the Deep South. The Great Lakes and New England will remain warm and dry with seasonal temperatures expected.

# Spot Weather Forecast 

Weather - Fire Behavior Category

Spot weather forecasts should be requested or submitted online for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

- Basic elements needed for a spot weather forecast include:
- Name of fire and management agency
- Request time and date
- Location by $1 / 4$ section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks and important U.S. indicators)

Activity: Calibrate your Kestrel and review belt weather kit use.
