Predictive Services Discussion: Cooler conditions will spread across the Northwest and the Northern Rockies. Gusty winds will develop east of the continental divide over Montana, Wyoming and the Dakotas as strong low pressure forms in the northern Plains. Scattered showers and thunderstorms are likely over the central Rockies and into the Southwest, with isolated thunderstorms forming in the central and eastern Great Basin. Isolated storms are also possible into Wyoming and southcentral Montana. Smoke will remain over much of the western U.S. but not as thick as previous days. In the East, scattered showers and thunderstorms will stretch from Texas to the Mid-Atlantic.

Safety Zone(s) are locations where the threatened firefighter may find refuge from the danger. Unfortunately shelter deployment sites have been incorrectly called safety zones. Safety zones should be conceptualized and planned as a location where no shelter is needed. This does not intend for the firefighter to hesitate to deploy their shelter if needed, just if a shelter is deployed the location is not a tree safety zone. Fireline intensity and safety zone topographic location determine safety zone effectiveness.

How have you determined the distinction between a safety zone and a deployment zone?

- Is refuge in a vehicle, house an acceptable tactic?
- Consider access to the incident. You are often confronted with considerable distances of unburned fuel to cross. How do you mange LCES?

[^0]:    * McLeod, Okanogan/Wenatchee NF. Eight miles north of Mazama, WA. Timber. Moderate fire behavior with torching, flanking and creeping. Communication infrastructure threatened.
