Predictive Services Discussion: A strong monsoonal surge of moisture into the northern portion of the Four Corners and Great Basin will provide some relief to Utah, eastern Nevada, and Colorado in the form of higher humidity and scattered wet storms. Given the strength of the surge, convection should reach as far north as North Dakota, southern Montana, Idaho, and possibly southeastern Oregon. The Sierra could also see isolated storms. There is a concern that some of the storms on the northwestern fringes could be relatively dry.
Previous days' winds should diminish across the northern tier but remain breezy across the Dakotas as a weak disturbance moves east across Manitoba. Texas will return to hot and dry conditions as the low pressure area previously over the northern portion of the state moves northeast toward the middle Mississippi River Valley, bringing storms to the upper Midwest. Scattered showers and storms are also expected across the Mid-Atlantic region, as a low pressure area remains stalled over the area.

## Retardant \& Water Drop Safety <br> Aviation Category

Having retardant (jell, foam), paracargo, and water dropped on a fire should be a routine event. However, there are risks associated drops that can pose serious threats to personnel and equipment. Consider the following for all drops:

- Be aware of the location and flight patterns (final approach, drop zone, exit) of aircraft during drop operations.
- Be sure you have positive contact with the pilot before the drop.

All persons, vehicles, and animals should be cleared from the danger zone prior to the arrival of the aircraft.

Beware of "streamers" or parachutes that don't open.

- Personnel can be injured by the impact of material dropped by aircraft. Clear personnel out of the target area when the drop is conducted. If an individual is caught unaware in a drop zone:
- Hold your hand tool away from your body.
- Lie face down with hardhat in place and head toward the oncoming aircraft.
- Grasp something firm to prevent being carried or rolled about by dropped liquid.
- Do not run unless escape is ensured.
- Get clear of dead snags and tops.
- Be aware of rolling debris below the drop site in steep terrain.
- Working in an area covered by retardant should be done with caution due to slippery surfaces.
- If possible, wash the retardant off your skin to prevent irritation.
