Predictive Services Discussion: High pressure over the West will weaken slightly as a pair of disturbances move along its periphery. The first disturbance will move northeast from the Pacific Ocean into the Northwest and will draw up monsoonal moisture into northern California, Oregon, Nevada, and southern Idaho. These areas can expect isolated, but significant lightning-producing storms in the afternoon. The second disturbance will move southeast across eastern Montana and the Dakotas, bringing widely scattered wet storms to the Black Hills by late afternoon. Further south and west, scattered wet convection is expected across the Four Corners area, as the monsoon remains active and moist. In the East, expect scattered storms across the middle Mississippi River Valley as a weak disturbance moves east. Look for Texas to return to hot and dry conditions as it sits beneath the high pressure ridge.

Hypothermia<br>Firefighter Health \& First Aid

Hypothermia occurs when your core body temperature falls below normal. It can easily happen in cold winds or wetness. Hypothermia can also occur in moderately cool temperatures, particularly if coupled with dehydration. People tend to forget to drink on cool, wet days and can get hypothermic even when the temperature stays well above freezing.

- Symptoms of hypothermia include:
- Slurred speech
- Weakness and loss of coordination
- Confusion
- Irrational behavior
- Uncontrollable shivering (at extremely low body temperatures, shivering may stop)
- Pale and cold skin
- Drowsiness - especially in more severe stages
- Slowed breathing or heart rate

Your body automatically begins to shiver to warm itself. As your energy is used to keep warm, you may reach a point where your body will be unable to warm itself. If left untreated, your body will gradually shut down; and you can die.

- You can avoid hypothermia with the following precautions:
- Guard against dehydration.
- Avoid fatigue.
- Avoid cold winds.
- Take precautions, change out of wet clothes.
- Be aware of the symptoms and take action upon their onset.
- If you recognize hypothermia, take the following steps:
- Move the patient to shelter.
- Remove wet clothes and replace them with warm, dry garments.
- If the victim is alert, give them food and warm liquids to drink.
