Predictive Services Discussion: The ridge of high pressure will remain strong over the inland west and continue to bring warmer than average temperatures with diurnal winds and marginal overnight humidity recoveries. Isolated storms will be possible along and west of the Continental Divide in Montana and Wyoming. A strong high pressure area at the surface will move south into central Montana, creating a breezy easterly flow across the western half of the state and possibly northern Idaho. With the center of the high pressure area located mostly over southern California, the northerly flow on the front (east) side of the ridge will suppress monsoonal convection to mainly areas near the Mexican Border. Further north, a trough of low pressure will bring cooler temperatures and possibly isolated storms to the Pacific Northwest. A passing trough of low pressure will bring scattered storms to the central portion of the Great Plains, while a stalled front is expected to bring the same to the Deep South and along the Atlantic Coast south of Delaware. Both the Great Lakes Region and the Northeast will remain warm and dry under the influence of a weak high pressure ridge.

# Responding To Vehicle Fires 

Vehicles/Roads Category

Suppression of vehicle fires is extremely dangerous and poses many health and safety hazards to firefighters. The following procedures are recommended:

Wear a high visibility reflective vest or other high visibility clothing if available.

- Secure the scene and provide or request assistance for traffic control.
- Park your vehicle to provide a protective barricade for you and your crew. Position it so that an inattentive or drunk driver will hit your vehicle and not your crew. Your vehicle is expendable; you are not.
- Provide for your escape route at the scene.
- Do not use road flares if fuel is leaking from the vehicle.
- DO NOT BREATHE ANY SMOKE. Smoke from vehicle fires contains toxic chemicals that will kill you.
- Vehicle fires are considered a hazardous materials scene. Suppression action should only be taken if the crew is trained, equipped, and authorized in the use of Self-Contained Breathing Apparatus (SCBA).
- If taking suppression action on wildland fuels, firefighters should ensure that they are a safe distance from the burning vehicle ( 100 -feet minimum), and avoid contact with vehicle fire smoke or fumes.
