Predictive Services Discussion: A breezy westerly flow will develop over the Pacific Northwest, Northern Rockies, and the Northern Great Basin, as a weak cold front moves east across Montana. Isolated dry storms will be possible across southwestern and south central Montana in the afternoon. Temperatures across these regions will moderate and perhaps even be below normal in some locations. To the south, the Four Corners high will be centered over Texas. This will allow for monsoonal moisture to work its way north from Mexico into the Fourth Corners. The central Great Basin and California can expect normal, warm, and dry conditions. To the East, a strengthening disturbance will move from Minnesota east toward the Great Lakes, bringing showers and storms. The East will remain hot and dry as high pressure over Georgia and South Carolina suppresses convection, limiting it mainly to Florida in the afternoon. Dry conditions will also be present across the Northeast, as the weak high pressure area to the south extends its influence northward.

## Mine Features and Hazards

Miscellaneous Fireline Hazards

When working in an area which is known or suspected for past mining activities, be aware of the serious hazards, which may or may not be visible.

- Surface Features at Abandoned Mines: Mine buildings (mill sites, assorted support structures) waste rock dumps, glory holes (large open pits), trenches and shallow pits, tailing piles, other chemical hazards (explosives, 55-gal drums, meth lab supplies)
- Underground Features: Vertical openings-shafts, winzes, raises, ore chutes, stopes, ladders, stulls horizontal openings (often contain an unforeseen vertical component)-adits (single opening) and tunnels (two openings)
- Hazards associated with these features: Rock fall (near portals, highwalls, shaft collars or ore chutes), collapse and entrapment while underground instability or perimeter or overhanging rock slips, trips, and falls (especially down a winze/shaft inside an adit), mine gases (carbon monoxide, hydrogen sulfide, methane, etc) entanglement on wiring and debris within puddles collision between your head and the overlying rock, unknown substances, explosives, blasting caps or chemicals
