Predictive Services Discussion: Below average temperatures and scattered showers and storms are possible across portions west of the Continental Divide, as an unseasonably cool system drops south from British Columbia and Alberta into the country. As the system moves into the region, breezy winds will be possible across the Great Basin, particularly the western half where fuels remain critically dry. In the Southwest, the monsoon will continue across the Four Corners as the flow begins to weaken. Across the East, high pressure over the mid-South will keep conditions hot and humid from the Ohio River Valley south to the Gulf Coast. To the north, wet conditions are expected across the Great Lakes Region as a system moves east across the region, while the Northeast will remain dry as a westerly flow continues. While overall dry conditions are expected, scattered storms will be possible across the Midwest and across New England.

Serious Injury Procedures

Firefighter Health & First Aid

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
 - Number of people injured
 - Type of injuries
 - Severity of injuries (light, moderate, severe, life threatening)
 - Mechanism of injury
 - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
