Predictive Services Discussion: The breezy, dry west-southwesterly flow will continue over the northern half of the CONUS, as a weak cold front moves across the Pacific Northwest toward the Northern Rockies by afternoon. The passing of the front will allow for some mixing of the upper level winds with lower level winds to create gusty winds in the afternoon. Fires along the eastern slopes of the Cascades will be most receptive, due to the fact they have not received wetting precipitation in quite some time. To the south, the strong high pressure ridge over Texas will expand and drift westward, producing hot and dry conditions west from the state and into California. In the East, a weak frontal boundary will provide enough lift to create scattered showers and thunderstorms from New England southwest into Tennessee. A weak sea breeze will allow for isolated storm development along the Gulf Coast and along the eastern coast of Florida.

## Roadside Incident Response

Vehicles/Roads Category

Nationally, the number of injuries and fatalities among emergency responders who are responding to roadside incidents is increasing. Although most wildland fires occur in remote areas, there are situations where wildland fire personnel are responding to fires along rural country roads, jeep roads, or major highways; the risk still exists for our firefighters. Below is a checklist of considerations that should be utilized when responding to fires and other incidents along roadsides:

## Considerations

- Firefighter and public safety will always be the number one priority.
- Utilize L.C.E.S. in all incident activities.
- Personal Protective Equipment is to be used on all incidents.

## Upon Arrival at the Scene

Size up incident - see Incident Response Pocket Guide

- What has happened?
- What is happening?
- What will or could happen?
- Is this a HazMat situation?

## Risk Management Process

- Decision Point, Go/No-Go. See the Incident Response Pocket Guide, page 1

## Tactical Considerations

- Anytime traffic flow is affected by the incident, contact the jurisdictional law enforcement agency.
- Conduct all operations as far from traffic lanes as possible to provide for crew and public safety.
- Park units on the same side of the roadway whenever possible to avoid traffic congestion.
- Personnel do not exit the fire apparatus until instructed to do so by the module leader.
- Exit the fire apparatus away from the roadway or where hazard exposure is minimized.
- Exit the fire apparatus with full personal protective equipment.
- Post a lookout to watch for and control oncoming traffic.
- Utilize forward and rear spotters when visibility is impaired or road conditions warrant.
- Utilize and place road flares or other traffic warning signs whenever possible.
- If equipment needs to be removed from the traffic side of the apparatus, one person will retrieve the equipment and a lookout will watch for oncoming traffic.
- Engine operators will operate pumps from the non-traffic side or from the cab of the apparatus when possible. Keep all hose, fire tools, and equipment out of traffic lanes when possible.
- During night operations utilize reflective clothing, vests and other safety equipment as necessary.
- All emergency responses on roadways will be concluded as quickly as possible to reduce personnel exposure.
- Cancel or demob unnecessary apparatus as soon as possible.
** Each agency emergency vehicle operator will follow their particular state laws and agency policies governing the operations of emergency vehicles.
