## National Fire Activity

Initial Attack Activity:
New large incidents:
Large fires contained:
Uncontained large fires:**
Area Command teams committed:
NIMOs committed:
Type 1 IMTs committed:
Type 2 IMTs committed:

Light (90 fires)
5
5
39
0

Nationally, there are 59 large fires being managed under a strategy other than full suppression.
**Uncontained large fires include only fires being managed under a full suppression strategy.
Link to Geographic Area daily reports.
Two hundred twenty-three soldiers from the $14^{\text {th }}$ Brigade Engineer Battalion based out of Joint Base LewisMcChord, Washington are deployed in support of the Mendocino Complex.

One RC-26 aircraft with Distributed Real-Time Infrared (DRTI) capability and support personnel from the 141st Air Refueling Wing (Washington Air National Guard) has been deployed to Spokane, WA in support of wildland fire operations in the West.

## Northwest Area (PL 4)

| New fires: | 6 |
| :--- | :--- |
| New large incidents: | 0 |
| Uncontained large fires: | 9 |
| Type 1 IMTs committed: | 2 |
| Type 2 IMTs committed: | 6 |

Crescent Mountain, Okanogan/Wenatchee NF. IMT 1 (Turman). IMT is also managing the McLeod and Holman incidents. Eighteen miles west of Winthrop, WA. Timber. Active fire behavior with creeping, backing and flanking. Numerous residences threatened. Evacuations, road, area and trail closures in effect.

McLeod, Okanogan-Wenatchee NF. Eight miles north of Mazama, WA. Timber. Moderate fire behavior with isolated torching, backing and flanking. Road, area and trail closures in effect.

Holman, Okanogan-Wenatchee NF. Nineteen miles northwest of Mazama, WA. Timber. Minimal fire behavior. Structures and communication infrastructure threatened. Road, area and trail closures in effect.

Klondike, Rogue River-Siskiyou NF. IMT 1 (Dueitt). Nine miles northwest of Selma, OR. Timber and chaparral. No new information.

Terwilliger, Williamette NF. IMT 2 (Connell). Five miles southeast of Blue River, OR. Timber. Active fire behavior with uphill runs, torching and short-range spotting. Numerous structures and energy infrastructure threatened. Road, area and trail closures in effect.

Natchez, Rogue River-Siskiyou NF. Transfer of command from IMT 2 (Gales) to IMT 2 (Knerr) will occur today. Fifteen miles southeast of Cave Junction, OR. Timber and chaparral. Moderate fire behavior with torching, backing and flanking. Numerous structures threatened. Road, area and trail closures in effect.

Cougar Creek, Okanogan-Wenatchee NF. IMT 2 (Lawson). IMT is also managing the Bannock Lakes incident. Twelve miles northwest of Ardenvoir, WA. Timber, medium logging slash and closed timber litter. Active fire behavior with torching, short crown runs and flanking. Numerous structures threatened. Road, area and trail closures in effect.

Bannock Lakes, Okanogan-Wenatchee NF. Fourteen miles southwest of Stehekin, WA. Timber and brush. Minimal fire behavior. Trail closures in effect.

Watson Creek, Fremont-Winema NF. Transfer of command from IMT 2 (Sheldon) back to the local unit will occur today. Thirteen miles west of Paisley, OR. Timber and brush. Minimal fire behavior. Numerous structures threatened. Evacuations, road, area and trail closures in effect.

Taylor Creek, Medford District, BLM. Transfer of command from IMT 2 (Harrod) back to the local unit will occur today. IMT is also managing the east side of the Klondike incident. Ten miles west of Grants Pass, OR. Timber and brush. Minimal fire behavior. Numerous structures threatened. Road, area and trail closures in effect.

Mile Marker 44, Yakama Agency, BIA. Seventeen miles southwest of Toppenish, WA. Brush and tall grass. Minimal fire behavior.

Miles, Umpqua NF. Five miles northeast of Trail, OR. Timber. Active fire behavior with single tree torching, backing and spotting. Numerous structures and energy infrastructure threatened. Road, area and trail closures in effect.

Columbus, Umpqua NF. Fifteen miles east of Tiller, OR. Timber. Active fire behavior with backing, single tree torching and creeping. Road, area and trail closures in effect.

Predictive Services Discussion: An upper level trough will move southeast into the Pacific Northwest and the Northern Rockies by afternoon. Scattered showers and storms will accompany the passage of an associated cold front as it moves east across Idaho, Montana, and Wyoming in the afternoon. To the south of the front across northern Nevada and Utah, breezy winds and low humidities could create critical fire weather conditions in areas where fuels remain receptive and critically dry. Scattered wet convection will continue across the Four Corners Region, Texas and the central Great Plains, as a strong southerly flow continues to pump Gulf and monsoonal moisture northward. In the East, the strong ridge of high pressure over the MidAtlantic States will maintain its grip, allowing the ongoing heat wave to continue.

## Bees and Wasps

Firefighter Health \& First Aid

In general, bees sting to protect their hives. They seldom sting when they are foraging unless they feel threatened (being swatted at or stepped on). A large number of bees or wasps foraging in one area may indicate a colony is nearby. If you intend to work or camp in the area, scout the area for bee/wasp habitat first. Colonies vary in behavior over time, especially with changes in season, becoming more aggressive and easily agitated in the late summer and fall. You may pass the same colony for weeks and then one day provoke them unexpectedly.

## - Look out for colonies:

Bees and wasps nest in a wide variety of locations, such as pipes, holes, behind shutters, under shingles, cracks and crevices within trees and rocks, and hanging from branches. Be alert for groups of flying bees entering or leaving an opening and listen for buzzing sounds. Be especially alert when climbing, digging fire line and moving logs. DO NOT put your hands in places you cannot see.

Be particularly careful when using any heavy equipment that produces sound vibrations, such as chainsaws, weed eaters and pumps. Keep escape routes in mind.

If you disturb a nest and are being attacked, run away. Use your shroud or shirt to protect your head, neck and face. Swatting and waving your arms aggravates bees/wasps even more!

- About Africanized and European honey bees:

Honey bees are about $5 / 8$-inch long, brown, hairy insects with black encircling their abdomen, giving them a subtle striped appearance. All honey bees look alike. Only an expert can tell them apart. The sting from a single Africanized
 honey bee is no more harmful than one from the common garden or European honey bee. Africanized honey bees are known as "killer bees" because they defend their nests more aggressively, with less provocation, and in larger numbers than the other honey bees, resulting in a greater chance of receiving multiple stings. Africanized honey bees are found in the Southwest and are spreading across the South. You are more likely to be struck by lightning than being killed by Africanized bees.

## - Considerations with all bees and wasps:

If a bee gets in the vehicle while you are driving, stay calm, pull over and stop. Let the bee out. Keep trash away from your camp and keep it covered. Look at what you are drinking and eating. Bees and wasps are attracted to accessible food and water.

## - If you get stung:

Remove the stinger. The end of a stinger is barbed and will remain stuck in the skin even if the bee is removed. Muscles in the stinger allow it to continue pumping venom into the victim, even if it is no longer connected to the bee. Do not pull the stinger out with your fingers or tweezers; this will squeeze out more venom. Instead, scrape the stinger out with your fingernail, the edge of a credit card, a dull knife blade, or other straight edged object.

- Reactions associated with bee stings and those of other stinging insects can be local or systemic, allergic or life threatening.

## Local Reactions:

A local reaction is usually characterized by pain, swelling, redness, itching, and a welt surrounding the wound made by the stinger. Swelling can sometimes be locally severe. For instance, if stung on the finger, the arm may be swollen even up to the elbow. Such swelling is fairly common, even though it may be alarming. Swelling may be reduced by cooling the wound and/or taking an antihistamine such as Benadryl. Topical solutions such as calamine may also help alleviate pain.

## Systemic, Allergic, or Life-Threatening Reactions:

Allergic reactions can develop anywhere on the body and may include rash or hives, dizziness or headache, cramps, nausea, vomiting, swelling not in the general area of the sting, shortness of breath or difficulty swallowing, shock and unconsciousness. If you experience any of these symptoms, seek emergency medical assistance immediately. Symptoms can begin immediately following the sting or up to 30 minutes later and might last for hours.

## - If you know you are allergic:

Anaphylaxis, if treated in time, usually can be reversed by epinephrine (adrenaline) injected into the body. Individuals who are allergic to stings should carry epinephrine in either a normal syringe (sting kit) or an auto-injector (Epi-Pen) when working outside and communicate their allergy to supervisor/coworkers in case they become incapacitated. Epinephrine is obtainable only by prescription from a physician.

## - Discussion Topics:

- Have you and your crew identified who is allergic to bee/wasp stings? Are they carrying their prescription Epi? Identify the Epi and its location to the rest of the crew.
- If you have an EMT on your crew/team, what are their protocols for treating stings and related allergic reactions?
- Discuss how you and your crew will safely flag or mark any identified nests/hives.
