Predictive Services Discussion: The upper level trough moving through the Pacific Northwest will weaken and move into southwestern Canada by mid-day, leaving the northwestern portion of the country in a breezy westerly flow pattern with slightly above average temperatures. Scattered showers will be possible across the Olympic Peninsula and the Washington Cascades. Breezy west winds will be present as far south as northern California and Nevada. Hot and dry conditions are expected across Southern California, as high pressure off shore continues to stretch inland as far east as New Mexico. Sundowner winds will be possible across Southern California at night. In the East, a cold front will move east toward the Mississippi River and will bring wetting rainfall to the Great Lakes Region. Upstate New York and New England will remain warm and dry with seasonal temperatures. The southeast will remain warm and humid with scattered storms.

# ATV - How to Properly Ride and Operate 

Vehicles/Roads Category

Riding an ATV correctly allows the operator to operate and control the machine more easily, and react more quickly to changes in terrain and environment. Proper riding posture includes:
$\checkmark$ head and eyes up, looking forward;
$\checkmark$ shoulders relaxed, with elbows bent slightly;
$\checkmark$ hands on the handlebars;
$\checkmark$ knees in toward the gas tank;
$\checkmark$ feet on the footrests, toes pointing straight ahead; and
$\checkmark$ back should be straight but not tense.

- To turn an ATV, keep most of your body weight on the outside foot peg and lean your upper body into the turn. Never lower your foot to the ground for stability-could cause ejection if foot is caught by tire.
- When climbing hills, shift your body weight forward to keep the front wheel(s) on the ground.
- If stopped while going uphill, do not apply the rear brake only. Apply equal pressure to both front and rear brakes, but never only to the rear brake. Get off the machine and turn it around to proceed down the hill.
- When going downhill, keep the engine running and in low gear, apply both front and rear brakes with even pressure and avoid sharp turns. Slide body forward on seat towards gas tank, keeping body weight back by leaning backwards. This will help keep weight on back wheels and lessen potential to flip ATV over forward. Avoid "side hill" situations. When they are unavoidable, lean into the hill.
- When carrying a load up hill, if possible, place load on the front of the ATV to help keep the front end of the ATV from flipping over. If going downhill, place load on back of ATV to help keep the ATV from flipping over forward. If loads cannot be adjusted, (drip torch mounted on back), try to equalize the load on front and back if possible.
- Only operate an ATV under the conditions for which you have been trained, qualified for and are experienced in riding.
- As a last resort to avoid an impending collision, roll off the vehicle and kick yourself free of it.
