Predictive Services Discussion: A very cool upper level low pressure area will begin to move into the Pacific Northwest from the Gulf of Alaska. Wetting rains are expected across the Washington Cascades and the Okanogan by afternoon. South of this system across Oregon, the Great Basin and northern California, very breezy winds and low humidity will create critical fire weather conditions. Some of the critical conditions could extend into Montana, though humidity will be slightly elevated. Across the Southeast, moderate to heavy rainfall will continue across the Deep South and along the Atlantic Coast, as a slow-moving front continues to be saturated with tropical moisture. In the Pacific, the northern coasts of the Hawaiian Islands can expect breezy winds and heavy rainfall, as a weakening tropical storm moves from east to west across the islands.

## Aviation Communications

Aviation Category

Discuss the following information in terms of effective communication with aircraft. Involve the pilot in this discussion.

- Establish an air-to-ground frequency on the fire, and make sure everyone knows it.
- Avoid switching frequencies in the middle of an operational period.
- Discuss Guard frequencies:
- How they work.
- When to use them.
- What frequencies are established for aircraft in your area?
- Aviation communications should be clear, concise, short, and to the point.
- Use standard terminology that can be understood by all people. Do not use local slang.
- Know what you want to say before you key the microphone. Don't think and talk at the same time.
- Before you key your microphone to talk, be sure to listen to ensure you don't cut into another transmission.
- Identify who you want to talk to by the call sign and identify yourself in every transmission.
- If the frequency gets congested, request another frequency. Upon receipt, ensure that all people who need to be on the new frequency transfer to that frequency.
- When giving ground descriptions, describe the location as if you are viewing the location from the direction an aircraft would be traveling. Use a common frame of reference for the sender and receiver.
- Use easily understandable directions, such as north, south, east, west, 2 o'clock, 9 o'clock, left 20 degrees, right 45 degrees, etc.
- When giving directions, always give them in relation to the pilot's perspective.
